CC and (2) a kit comprising a first container, a LABEL on the first
CC container, and a composition contained within the first container, where
CC the composition comprises a VEGFR modulating agent in the amount
CC effective to promote liver growth, a second container comprising a buffer
CC and an instruction for using the kit for promoting liver growth. (I) has
CC hepatotropic and antiinflammatory activities, and can be used as a VEGFR
CC modulator, and a liver growth promoter. (I) can be used for promoting
CC liver growth or hepatocyte proliferation in the liver of a subject,
CC treating a pathological liver condition in a subject such as liver
CC failure, hepatitis, liver cirrhosis, toxic liver damage, medicamentary
CC liver damage, hepatic encephalopathy, hepatic coma or hepatic necrosis,
CC or for protecting liver from damage in a subject due to exposure to
CC hepatotoxic agent. The VEGFR modulator create a local cascade of
CC signaling events originating in sinusoidal endothelial cells following
CC VEGF receptor activation, which is much more potent and beneficial in
CC promoting hepatocyte proliferation and liver growth than systemic
CC delivery of the principal liver mitogen, hepatocyte growth factor (HGF).
CC The present sequence is used in the exemplification of the present
CC invention.

PT   Detection of polymorphic genetic markers of the form (dC-dA)n(dG-dT)n -
PT   using novel nucleic acid mols. as primers.
XX
PS   Example 9; Col 61-62; 186pp; English.
XX
CC   The invention relates to the isolation of polymorphic repeat sequences
CC   having the sequence (dC-dA)n.(dG-dT)n which can be used as genetic
CC   markers. Primers based on these sequences can be used to detect these
CC   repeats, especially for use in e.g paternity or maternity testing, human
CC   genetic analysis such as linkage analysis of genetic disease, commercial
CC   animal or plant breeding or pedigree analysis. The sequences AAT66084-
CC   T66107 represent repeat sequences of low informativeness found in
CC   specific human genes. This repeat sequence is found in the human
CC   chromosomal clone SW13. The sequence is amplified by primers AAT66106-7.

PT   Nucleic acid encoding soluble form of vascular endothelial cell growth
PT   factor receptor - and related vector and transformed cells, expressing
PT   soluble inhibitor of VEGF useful for inhibiting angiogenesis, e.g. for
PT   treatment of psoriasis, arthritis, tumours etc.
XX
PS   Example 7; Col 15; 47pp; English.
XX
CC   This primer is used for the PCR amplification of FLT, a vascular
CC   endothelial cell growth factor (VEGF). This generates a soluble truncated
CC   form of FLT (sVEGF-RTMI) containing the transmembrane region of FLT. A
CC   related soluble VEGF receptor/inhibitor (sVEGF-RI) molecule represents a
CC   fragment of the VEGF receptor that binds VEGF with high affinity but is
CC   unable to transduce a signal. sVEGF-RI is used to inhibit VEGF activity,
CC   specifically VEGF-induced angiogenesis, particularly for treatment of
CC   psoriasis, rheumatoid arthritis, haemangiomas, angiofibromas, diabetic
CC   retinopathy, neovascular glaucoma or tumour vascularisation. The sVEGF-RI
CC   can be administered topically or intravenously or from slow-release
CC   matrices

PT   Soluble soluble vascular endothelial cell growth factor inhibitor protein
PT   - useful for treating angiogenesis-related diseases or preventing tumour
PT   vascularisation.
XX
PS   Example 7; Col 22; 50pp; English.
XX
CC   Primers AAX04439-X04440 were used to PCR amplify and generate a truncated
CC   FTL receptor (a vascular endothelial cell growth factor (VEGF) receptor).
CC   The resultant protein, designated sVEGF-RTMI (AAW68008), can be used to
CC   inhibit the activity of VEGF, preventing it from activating its receptors
CC   on vascular endothelial cells. An inhibitor of VEGF would be useful for
CC   treating angiogenesis-related diseases, e.g. psoriasis, arthritis,
CC   haemangiomas, angiofibromas, diabetic retinopathy and neovascular
CC   glaucoma, and for preventing tumour vascularisation

PT Modulating angiogenesis and/or apoptosis for preventing or treating
PT cancer, myocardial infarction and promoting healing, by modulating the
PT activity of vascular endothelial growth factor-modulated gene
PT polypeptide.
XX
PS Example 2; Page 103; 155pp; English.
XX
CC The invention relates to modulating angiogenesis and cell survival that
CC involves modulating the activity of at least one vascular endothelial
CC growth factor (VEGF)-modulated gene polypeptide. The method is useful for
CC modulating angiogenesis and cell survival, for treating tumour and cancer
CC by decreasing angiogenesis in cancerous tumours and treating myocardial
CC infarction and promoting healing, by increasing angiogenesis. Transgenic
CC non-human animals, having disrupted arginine-rich protein (ARP), are
CC useful for determining the clinical stage of ovarian tumorous, which is
CC useful for determining if the tumour has potential for metastasis. ARP is
CC useful in gene therapy and in diagnostic applications. VEGFmg proteins
CC are useful in the treatment of tumours, neoplasias, hemangiomas,
CC rheumatoid arthritis, atherosclerosis, idiopathic pulmonary fibrosis,
CC vascular restenosis, arteriovenous malformations, meningioma, neovascular
CC glaucoma, psoriasis, hemophilic joints, hypertrophic scars, Osler-Weber
CC syndrome, scleroderma, vascular adhesion pathologies, synovitis,
CC dermatitis, endometriosis, diabetic retinopathy, neovascularization
CC associated with corneal injury or grafts, wound, sore, and ulcer healing.

CC non-human animals, having disrupted arginine-rich protein (ARP), are
CC useful for determining the clinical stage of ovarian tumorous, which is
CC useful for determining if the tumour has potential for metastasis. ARP is
CC useful in gene therapy and in diagnostic applications. VEGFmg proteins
CC are useful in the treatment of tumours, neoplasias, hemangiomas,
CC rheumatoid arthritis, atherosclerosis, idiopathic pulmonary fibrosis,
CC vascular restenosis, arteriovenous malformations, meningioma, neovascular
CC glaucoma, psoriasis, hemophilic joints, hypertrophic scars, Osler-Weber
CC syndrome, scleroderma, vascular adhesion pathologies, synovitis,
CC dermatitis, endometriosis, diabetic retinopathy, neovascularization
CC associated with corneal injury or grafts, wound, sore, and ulcer healing.
CC Sequences AAI67449-487 represent probe primer sets used for real-time RT-
CC PCR analysis of differential gene expression

PT   Novel antisense oligonucleotides useful for inhibiting vascular
PT   endothelial growth factor expression, angiogenesis and for treating
PT   cancer, e.g., Kaposi's sarcoma, ovarian cancer and prostrate cancer.
XX
PS   Example 12; Page 56; 105pp; English.
XX
CC   The invention provides a composition comprising one or more antisense
CC   oligonucleotides directed against vascular endothelial growth factor
CC   (VEGF) where the antisense oligonucleotides inhibits proliferation of
CC   cells exhibiting autocrine VEGF activity at an IC_5_0 concentration of
CC   between 0.5-2.5 micro Ma. The antisense oligonucleotides may be directed
CC   against VEGF for inhibiting cancer cell proliferation and angiogenesis.
CC   Preferably the oligonucleotide AAH23032 (a modified version of AAH22984)
CC   is used and may be utilized to treat Kaposi's sarcoma, ovarian cancer,
CC   prostrate cancer, pancreatic cancer or melanoma. Sequences AAH23012-023
CC   represent gene-specific primers used in RT-PCR amplification of VEGF
CC   receptors

PT   Synthesizing branched nucleic acids useful as diagnostic and molecular
PT   probes, involves combining first units having haloalkylamino groups and
PT   second units having thiol or phosphorothioate groups.
XX
PS   Example 7; Col 19; 20pp; English.
XX
CC   The present invention relates to a method for synthesising a branched or
CC   multiply connected macromolecular structure, comprising oligonucleotide
CC   clamps (OC). The macromolecular structure is capable of specifically
CC   binding to a target molecule, and can therefore be used as probes. At
CC   least one OC comprises a target binding sequence that binds specifically
CC   and stably with the target molecule, and at least two OCs comprise signal
CC   generation moieties capable of generating a detectable signal in the
CC   presence of the target molecule. In addition the OCs are connected to one
CC   another by thioalkylamino, or thiophosphorylalkylamino bridges. The
CC   present sequence is an OC used in the present invention

PT   Use of platelet-derived growth factor, vascular endothelial growth
PT   factor, or their modulators for modulating neural stem cell or neural
PT   progenitor cell activity, particularly for treating e.g. Alzheimer's,
PT   ischemia or stroke.
XX
PS   Example 11; Page 77; 119pp; English.
XX
CC   The sequences given in ABQ80256-69 are primers which were used to
CC   identify the presence of vascular endothelial growth factor (VEGF), or
CC   the VEGF receptors, Flk1, FLT-1 and FLT-4 in human stem cells (HSC). The
CC   method of the invention for alleviating or reducing a symptom of a
CC   disease or disorder of the nervous system comprises administering
CC   platelet-derived growth factor (PDGF), vascular endothelial growth factor
CC   (VEGF), a combination of PDGF and VEGF, or a PDGF or VEGF agonist, to a
CC   patient in order to modulate neural stem cell or neural progenitor cell
```

```
CC   activity in vivo. The method is useful for alleviating or reducing the
CC   symptoms of a disease or disorder of the nervous system, e.g.
CC   neurodegenerative disorders, neural stem cell disorders, neural
CC   progenitor disorders, ischaemic disorders, neurological traumas,
CC   affective disorders, neuropsychiatric disorders or learning and memory
CC   disorders. In particular, the method is useful for alleviating or
CC   treating Parkinson's disease and disorders, Huntington's disease,
CC   Alzheimer's disease, Amyotrophic Lateral Sclerosis, spinal ischaemia,
CC   ischaemic stroke, spinal cord injury or cancer-related brain/ spinal cord
CC   injury, schizophrenia and other psychoses, depression, bipolar
CC   depression/disorder, anxiety syndromes/disorders, phobias, stress and
CC   related syndromes, cognitive function disorders, aggression, drug and
CC   alcohol abuse, obsessive compulsive behaviour syndromes, seasonal mood
CC   disorder, borderline personality disorder, cerebral palsy, life style
CC   drug, multi-infarct dementia, Lewy body dementia, age related/geriatric
CC   dementia, epilepsy and injury related to epilepsy, spinal cord injury,
CC   brain injury, trauma related brain/spinal cord injury, anti-cancer
CC   treatment related brain/spinal cord tissue injury, infection and
CC   inflammation related brain/spinal cord injury, environmental toxin
CC   related brain/spinal cord injury, multiple sclerosis, autism, attention
CC   deficit disorders, narcolepsy or sleep disorders. The PDGF and/or VEGF,
CC   is useful in the manufacture of a medicament for alleviating or treating
CC   these diseases or disorders, accelerating growth of neural stem cells or
CC   neural progenitor cells, or inducing proliferation or differentiation of
CC   these cells. This primer gives an estimated band size of 347 bp

PT   New double-stranded interfering nucleic acid, useful e.g. for treatment
PT   and diagnosis of cancer, downregulates the vascular endothelial growth
PT   factor receptor gene.
XX
PS   Example 3; SEQ ID NO 2012; 207pp; English.
XX
CC   The present invention describes a double-stranded short interfering
CC   nucleic acid (siNA) that downregulates expression of the vascular
CC   endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC   siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC   delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC   that express siNA; and (5) single-stranded siNA with similar properties.
CC   The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC   ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC   gynaecological activities. The siNA are useful for modulating
CC   (downregulating) the expression of VEGFR genes. The siNA are potentially
CC   useful for treating a wide range of angiogenesis-associated conditions,
CC   particularly cancers, diabetic retinopathy, macular degeneration,
CC   neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC   and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC   drug screening, target identification and validation, genetic
CC   engineering, studying gene function, and also for gene mapping (e.g. of
CC   single-nucleotide polymorphisms). The present sequence is used in the
CC   exemplification of the present invention.

PT and diagnosis of cancer, downregulates the vascular endothelial growth
PT factor receptor gene.
XX
PS Example 3; SEQ ID NO 2014; 207pp; English.
XX
CC The present invention describes a double-stranded short interfering
CC nucleic acid (siNA) that downregulates expression of the vascular
CC endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC that express siNA; and (5) single-stranded siNA with similar properties.
CC The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC gynaecological activities. The siNA are useful for modulating
CC (downregulating) the expression of VEGFR genes. The siNA are potentially
CC useful for treating a wide range of angiogenesis-associated conditions,
CC particularly cancers, diabetic retinopathy, macular degeneration,
CC neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC drug screening, target identification and validation, genetic
CC engineering, studying gene function, and also for gene mapping (e.g. of
CC single-nucleotide polymorphisms). The present sequence is used in the
CC exemplification of the present invention.

PT factor receptor gene.
XX
PS Example 3; SEQ ID NO 1998; 207pp; English.
XX
CC The present invention describes a double-stranded short interfering
CC nucleic acid (siNA) that downregulates expression of the vascular
CC endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC that express siNA; and (5) single-stranded siNA with similar properties.
CC The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC gynaecological activities. The siNA are useful for modulating
CC (downregulating) the expression of VEGFR genes. The siNA are potentially
CC useful for treating a wide range of angiogenesis-associated conditions,
CC particularly cancers, diabetic retinopathy, macular degeneration,
CC neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC drug screening, target identification and validation, genetic
CC engineering, studying gene function, and also for gene mapping (e.g. of
CC single-nucleotide polymorphisms). The present sequence is used in the
CC exemplification of the present invention.

PT   New short interfering nucleic acid, useful e.g. for treatment and
PT   diagnosis of cancer, downregulates expression of Myc or Myb genes.
XX
PS   Example 7; Page 138; 161pp; English.
XX
CC   The invention relates to short interfering nucleic acids (siNA) which
CC   downregulate expression of the human Myc or Myb genes by RNA
CC   interference. The siNAs may or may not comprise ribonucleotides and may
CC   be double or single stranded. They further comprise sense and antisense
CC   regions, or alternatively are assembled from a sense oligonucleotide and
CC   an antisense oligonucleotide. Specifically, the siNAs include short
CC   interfering RNA (siRNA), double-stranded RNA, micro-RNA (miRNA) and short
CC   hairpin RNA (shRNA). The siNAs can be unmodified or chemically modified,
CC   can contain deoxyribonucleotides, and can be chemically synthesised,
CC   expressed from a vector or enzymatically synthesised. The invention also
CC   relates to kits for the in vitro or in vivo delivery of siNA; conjugates
CC   and/or complexes of siNA; and vectors that express siNA. The siNAs are
CC   used to modulate expression of the Myc or Myb genes in cells, tissue
CC   explants or organisms (e.g., by ex vivo gene therapy), or in grafts and
CC   transplants for the treatment of a variety of conditions. They may be
CC   used for treating cancers and other proliferative diseases, such as
CC   restenosis and polycystic kidney disease. The siNAs are also useful for
CC   drug screening, diagnosis, therapeutic target identification and
CC   validation, genetic engineering, pharmacogenomics, studying gene
CC   function, and gene mapping (e.g., of single nucleotide polymorphisms).
CC   The present sequence represents a human Myb transcript target sequence.

PT   Novel polynucleotide useful for detecting single nucleotide polymorphisms
PT   in human gene.
XX
PS   Claim 2; SEQ ID NO 1688; 704pp; Japanese.
XX
CC   The invention relates to a novel polynucleotide isolated and purified
CC   from a human gene having any one of 935 fully defined sequences as given
CC   in specification, or a sequence having a base substitution. The invention
CC   further relates to: an oligonucleotide containing single nucleotide
CC   polymorphisms; a PCR primer set chosen from the combination of two DNA
CC   fragments from any one of 1220 fully defined sequences as given in
CC   specification; a labelling probe containing the SNP containing oligo; and
CC   a microarray equipped with the SNP containing oligo. The isolated human
CC   gene of the invention is useful for detecting the single nucleotide
CC   polymorphisms in human gene. The isolated human gene is also useful for
CC   diagnosis of disease and determination of side effect to a medical agent.
CC   The isolated human gene is also effective in detecting single nucleotide
CC   polymorphisms in a human gene. This polynucleotide sequence represents
CC   one of the PCR primers used in the single nucleotide polymorphism
CC   detection method of the invention.

PT   New double-stranded short interfering nucleic acid molecule, useful for
PT   down-regulating the expression of an endogenous mammalian target gene or
PT   for treating diseases that respond to modulation of gene expression or
PT   activity.
XX
PS   Example 24; SEQ ID NO 60; 593pp; English.
XX
CC   The invention relates to a double-stranded short interfering nucleic acid
CC   (siNA) molecule that down-regulates expression of an endogenous mammalian
CC   target gene comprising one or more chemical modifications and each strand
CC   of the double-stranded siNA comprises about 21 nucleotides. The siNA of
CC   the invention demonstrates antiarteriosclerotic, neuroprotective,
CC   nootropic, antiparkinsonian and anticonvulsant activities and may be
CC   useful for down-regulating the expression of an endogenous mammalian
CC   target gene and therefore in the treatment of any disease or condition
CC   that responds to modulation of gene expression or activity in a cell,
CC   tissue or organism. The disease or condition may include pulmonary
CC   diseases such as restenosis, atherosclerosis, Alzheimer's disease,
CC   Parkinson's disease, epilepsy, dementia, huntington's disease or
CC   amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
CC   gene therapy applications. The current sequence is that of the siNA
CC   target DNA of the invention.

PT   New double-stranded short interfering nucleic acid molecule, useful for
PT   down-regulating the expression of an endogenous mammalian target gene or
PT   for treating diseases that respond to modulation of gene expression or
PT   activity.
XX
PS   Example 24; SEQ ID NO 56; 593pp; English.
XX
CC   The invention relates to a double-stranded short interfering nucleic acid
CC   (siNA) molecule that down-regulates expression of an endogenous mammalian
CC   target gene comprising one or more chemical modifications and each strand
CC   of the double-stranded siNA comprises about 21 nucleotides. The siNA of
CC   the invention demonstrates antiarteriosclerotic, neuroprotective,
CC   nootropic, antiparkinsonian and anticonvulsant activities and may be
CC   useful for down-regulating the expression of an endogenous mammalian
CC   target gene and therefore in the treatment of any disease or condition
CC   that responds to modulation of gene expression or activity in a cell,
CC   tissue or organism. The disease or condition may include pulmonary
CC   diseases such as restenosis, atherosclerosis, Alzheimer's disease,
CC   Parkinson's disease, epilepsy, dementia, huntington's disease or
CC   amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
CC   gene therapy applications. The current sequence is that of the siNA
CC   target DNA of the invention.

PT   New composition comprising an antisense oligonucleotide directed against
PT   vascular endothelial growth factor, useful for preparing a composition
PT   for treating cancer.
XX
PS   Example 12; Page 19; 54pp; English.
XX
CC   The invention relates to a composition comprising an antisense
CC   oligonucleotide directed against vascular endothelial growth factor
CC   (VEGF). The antisense oligonucleotide is useful for preparing a
CC   composition treating cancer, neoplastic proliferation, abnormal cellular
CC   proliferation and preventing angiogenesis. The present sequence is a
CC   reverse transcriptase (RT)-PCR primer for a VEGF or related gene, used to
CC   clone the coding region for expression in tumour cell lines. The cell
CC   lines were used to test prospective antisense oligonucleotides

PT New multifunctional siNA molecule that directs cleavage of the first and
PT second VEGF or VEGFR target sequences via RNA interference, useful in
PT preparing a composition for treating cell proliferative disorders e.g.
PT cancers.
XX
PS Disclosure; SEQ ID NO 2300; 396pp; English.
XX
CC The invention relates to a multifunctional siNA molecule comprising a
CC structure having Formula MF-III and which directs cleavage of the first
CC and second VEGF or VEGFR target sequences via RNA interference. The
CC multifunctional siNA molecule is useful in preparing a pharmaceutical
CC composition for treating cell proliferative disorders, e.g. cancer. The
CC present sequence represents a VEGFR siRNA target sequence.

CC   The invention relates to a multifunctional siNA molecule comprising a
CC   structure having Formula MF-III and which directs cleavage of the first
CC   and second VEGF or VEGFR target sequences via RNA interference. The
CC   multifunctional siNA molecule is useful in preparing a pharmaceutical
CC   composition for treating cell proliferative disorders, e.g. cancer. The
CC   present sequence represents a VEGFR siRNA target sequence.

CC The invention relates to a multifunctional siNA molecule comprising a
CC structure having Formula MF-III and which directs cleavage of the first
CC and second VEGF or VEGFR target sequences via RNA interference. The

```
CC   multifunctional siNA molecule is useful in preparing a pharmaceutical
CC   composition for treating cell proliferative disorders, e.g. cancer. The
CC   present sequence represents a VEGF/VEGFR siRNA.

CC   The invention relates to a multifunctional siNA molecule comprising a
CC   structure having Formula MF-III and which directs cleavage of the first
CC   and second VEGF or VEGFR target sequences via RNA interference. The
CC   multifunctional siNA molecule is useful in preparing a pharmaceutical
CC   composition for treating cell proliferative disorders, e.g. cancer. The
CC   present sequence represents a VEGFR siRNA target sequence.

PT   New isolated population of adherent human endothelial precursor cells
PT   (EPCs) made by stimulating human bone marrow cells expressing endothelial
PT   lineage markers, useful in evaluating anti-angiogenic and pro-angiogenic
PT   agents.
XX
PS   Example 1; SEQ ID NO 14; 33pp; English.
XX
CC   The invention relates to an isolated population of adherent human
CC   endothelial precursor cells (EPCs) made by stimulating human bone marrow
CC   cells expressing endothelial lineage markers AC133 and CD34 with VEGF,
CC   bFGF and heparin, and capable of invading human ovarian cancer cell
CC   clusters in a three dimensional in vitro assay. Also described: (1) a
CC   method of evaluating test agents as pro-angiogenic or anti-angiogenic
CC   factors, comprising contacting an isolated population of adherent human
CC   EPCs as described above with a test agent, evaluating tubule formation,
CC   or invasion by the isolated population contacted with the test agent
CC   relative to an isolated population not contacted with a test agent, and
CC   identifying the test agent as having potential use as a pro-angiogenic
CC   factor if it increases tubule formation, migration or invasion, and
CC   identifying the test agent as having potential use as an anti-angiogenic
CC   factor it decreases tubule formation, migration or invasion; (2) a method
CC   of stimulating AC133+/CD34+ human bone marrow cells, comprising culturing
CC   the cells on a collagen- and/or fibronectin-coated surface in the
CC   presence of FBS, VEGF and heparin; (3) a model system for human
CC   vasculature, comprising a nude mouse which has been co-injected with
CC   reconstituted basement membrane matrix and the isolated population of
CC   adherent human EPCs as cited above, or comprising a sample of Matrigel
CC   and aEPCs which has been removed from the nude mouse; (4) a method of
CC   identifying a mouse cell line useful as a model for tumor endothelial
CC   cells, comprising determining expression of two or more murine tumor
CC   endothelial markers in one or more mouse cell lines, selecting a mouse
CC   cell line which expressed at least two of the markers more than it
CC   expressed 18S RNA; and (5) a method of evaluating test agents as pro-
CC   angiogenic or anti-angiogenic factors, comprising contacting a mouse cell
CC   line selected by the method of (4) with a test agent, evaluating tubule
CC   formation, migration or invasion by the mouse cell line contacted with
CC   the test agent relative to the mouse cell line not contacted with a test
CC   agent, and identifying the test agent as having potential use as a pro-
CC   angiogenic factor if it increases tubule formation, migration or
CC   invasion, and identifying the test agent as having potential use an anti-
CC   angiogenic factor if it decreases tubule formation, migration or
CC   invasion. Antiangiogenic; Cytostatic. The methods and compositions of the
CC   present invention are useful for manufacturing model systems of tumor
CC   endothelial cells to evaluate potential anti-angiogenic and pro-
CC   angiogenic agents. The present sequence represents a PCR primer for human
CC   VEGFR1, which is used in an example from the present invention for murine
CC   cell line evaluation.

PT New multifunctional siNA molecule comprising a structure having Formula
PT MF-III, useful for treating a respiratory disease selected from asthma,
PT COPD, and allergic rhinitis.
XX
PS Example 13; SEQ ID NO 2242; 266pp; English.
XX
CC The invention comprises short interfering nucleic acid (siNA) molecules
CC which modulate vascular endothelial growth factor (VEGF) or VEGF receptor
CC (VEGFR) gene expression. The siNA molecules of the invention are useful
CC for treating respiratory diseases (e.g. asthma, COPD, and allergic
CC rhinitis). The present nucleic acid represents a VEGF/VEGFR-specific
CC siRNA sequence that was used in an example of the invention.

XX
PT   New multifunctional siNA molecule comprising a structure having Formula
PT   MF-III, useful for treating a respiratory disease selected from asthma,
PT   COPD, and allergic rhinitis.
XX
PS   Example 13; SEQ ID NO 2340; 266pp; English.
XX
CC   The invention comprises short interfering nucleic acid (siNA) molecules
CC   which modulate vascular endothelial growth factor (VEGF) or VEGF receptor
CC   (VEGFR) gene expression. The siNA molecules of the invention are useful
CC   for treating respiratory diseases (e.g. asthma, COPD, and allergic
CC   rhinitis). The present RNA sequence represents a target region for a
CC   VEGFR-specific siRNA.

PT New multifunctional siNA molecule comprising a structure having Formula
PT MF-III, useful for treating a respiratory disease selected from asthma,
PT COPD, and allergic rhinitis.
XX
PS Example 13; SEQ ID NO 2320; 266pp; English.
XX
CC The invention comprises short interfering nucleic acid (siNA) molecules
CC which modulate vascular endothelial growth factor (VEGF) or VEGF receptor
CC (VEGFR) gene expression. The siNA molecules of the invention are useful
CC for treating respiratory diseases (e.g. asthma, COPD, and allergic
CC rhinitis). The present RNA sequence represents a target region for a
CC VEGFR-specific siRNA.

PT New multifunctional siNA molecule comprising a structure having Formula
PT MF-III, useful for treating a respiratory disease selected from asthma,
PT COPD, and allergic rhinitis.

```
XX
PS   Example 13; SEQ ID NO 2317; 266pp; English.
XX
CC   The invention comprises short interfering nucleic acid (siNA) molecules
CC   which modulate vascular endothelial growth factor (VEGF) or VEGF receptor
CC   (VEGFR) gene expression. The siNA molecules of the invention are useful
CC   for treating respiratory diseases (e.g. asthma, COPD, and allergic
CC   rhinitis). The present RNA sequence represents a target region for a
CC   VEGFR-specific siRNA.

PT   New multifunctional siNA molecule comprising a structure having Formula
PT   MF-III, useful for treating a respiratory disease selected from asthma,
PT   COPD, and allergic rhinitis.
XX
PS   Example 13; SEQ ID NO 2288; 266pp; English.
XX
CC   The invention comprises short interfering nucleic acid (siNA) molecules
CC   which modulate vascular endothelial growth factor (VEGF) or VEGF receptor
CC   (VEGFR) gene expression. The siNA molecules of the invention are useful
CC   for treating respiratory diseases (e.g. asthma, COPD, and allergic
CC   rhinitis). The present RNA sequence represents a target region for a
CC   VEGFR-specific siRNA.

PT   New multifunctional siNA molecule comprising a structure having Formula
PT   MF-III, useful for treating a respiratory disease selected from asthma,
PT   COPD, and allergic rhinitis.
XX
PS   Example 13; SEQ ID NO 2314; 266pp; English.
XX
CC   The invention comprises short interfering nucleic acid (siNA) molecules
CC   which modulate vascular endothelial growth factor (VEGF) or VEGF receptor
CC   (VEGFR) gene expression. The siNA molecules of the invention are useful
CC   for treating respiratory diseases (e.g. asthma, COPD, and allergic
CC   rhinitis). The present RNA sequence represents a target region for a
CC   VEGFR-specific siRNA.

PT New multifunctional siNA molecule comprising a structure having Formula
PT MF-III, useful for treating a respiratory disease selected from asthma,
PT COPD, and allergic rhinitis.
XX
PS Example 13; SEQ ID NO 2357; 266pp; English.
XX
CC The invention comprises short interfering nucleic acid (siNA) molecules
CC which modulate vascular endothelial growth factor (VEGF) or VEGF receptor
CC (VEGFR) gene expression. The siNA molecules of the invention are useful
CC for treating respiratory diseases (e.g. asthma, COPD, and allergic
CC rhinitis). The present RNA sequence represents a target region for a
CC VEGFR-specific siRNA.

PT New multifunctional siNA molecule comprising a structure having Formula
PT MF-III, useful for treating a respiratory disease selected from asthma,
PT COPD, and allergic rhinitis.
XX
PS Example 13; SEQ ID NO 2307; 266pp; English.
XX
CC The invention comprises short interfering nucleic acid (siNA) molecules
CC which modulate vascular endothelial growth factor (VEGF) or VEGF receptor
CC (VEGFR) gene expression. The siNA molecules of the invention are useful
CC for treating respiratory diseases (e.g. asthma, COPD, and allergic
CC rhinitis). The present RNA sequence represents a target region for a
CC VEGFR-specific siRNA.

PT New multifunctional siNA molecule comprising a structure having Formula
PT MF-III, useful for treating a respiratory disease selected from asthma,
PT COPD, and allergic rhinitis.
XX
PS Example 13; SEQ ID NO 2223; 266pp; English.
XX
CC The invention comprises short interfering nucleic acid (siNA) molecules
CC which modulate vascular endothelial growth factor (VEGF) or VEGF receptor
CC (VEGFR) gene expression. The siNA molecules of the invention are useful
CC for treating respiratory diseases (e.g. asthma, COPD, and allergic
CC rhinitis). The present nucleic acid represents a VEGF/VEGFR-specific
CC siRNA sequence that was used in an example of the invention.

PT   New multifunctional siNA molecule comprising a structure having Formula
PT   MF-III, useful for treating a respiratory disease selected from asthma,
PT   COPD, and allergic rhinitis.
XX
PS   Example 13; SEQ ID NO 2328; 266pp; English.
XX
CC   The invention comprises short interfering nucleic acid (siNA) molecules
CC   which modulate vascular endothelial growth factor (VEGF) or VEGF receptor
CC   (VEGFR) gene expression. The siNA molecules of the invention are useful
CC   for treating respiratory diseases (e.g. asthma, COPD, and allergic
CC   rhinitis). The present RNA sequence represents a target region for a
CC   VEGFR-specific siRNA.

XX
PT   New multifunctional siNA molecule comprising a structure having Formula
PT   MF-III, useful for treating a respiratory disease selected from asthma,
PT   COPD, and allergic rhinitis.
XX
PS   Example 13; SEQ ID NO 2319; 266pp; English.
XX
CC   The invention comprises short interfering nucleic acid (siNA) molecules
CC   which modulate vascular endothelial growth factor (VEGF) or VEGF receptor
CC   (VEGFR) gene expression. The siNA molecules of the invention are useful
CC   for treating respiratory diseases (e.g. asthma, COPD, and allergic
CC   rhinitis). The present RNA sequence represents a target region for a
CC   VEGFR-specific siRNA.

PT   New multifunctional siNA molecule comprising a structure having Formula
PT   MF-III, useful for treating a respiratory disease selected from asthma,
PT   COPD, and allergic rhinitis.
XX
PS   Example 13; SEQ ID NO 2350; 266pp; English.
XX
CC   The invention comprises short interfering nucleic acid (siNA) molecules
CC   which modulate vascular endothelial growth factor (VEGF) or VEGF receptor
CC   (VEGFR) gene expression. The siNA molecules of the invention are useful
CC   for treating respiratory diseases (e.g. asthma, COPD, and allergic
CC   rhinitis). The present RNA sequence represents a target region for a
CC   VEGFR-specific siRNA.

PT   New multifunctional siNA molecule comprising a structure having Formula
PT   MF-III, useful for treating a respiratory disease selected from asthma,
PT   COPD, and allergic rhinitis.
XX
PS   Example 13; SEQ ID NO 2309; 266pp; English.
XX
CC   The invention comprises short interfering nucleic acid (siNA) molecules
CC   which modulate vascular endothelial growth factor (VEGF) or VEGF receptor
CC   (VEGFR) gene expression. The siNA molecules of the invention are useful
CC   for treating respiratory diseases (e.g. asthma, COPD, and allergic
CC   rhinitis). The present RNA sequence represents a target region for a
CC   VEGFR-specific siRNA.

PT   Angiogenesis-inhibiting chimeric recombinant proteins and their encoded
PT   DNA sequences, useful in producing pharmaceutical compositions for drugs
PT   to inhibit angiogenesis and to treat e.g. tumor.
XX
PS   Example 1; Page 8; 31pp; Chinese.
XX
CC   The invention relates to chimeric proteins constructed from various
CC   fragments of FLT-1 (fms-like tyrosine kinase) and KDR, which are tyrosine
CC   kinase receptors of VEGF (vascular endothelial growth factor). The
CC   proteins and their encoded DNA sequences are useful in producing
CC   pharmaceutical compositions for drugs to inhibit angiogenesis and to
CC   treat e.g. tumor, diabetic retinopathy, arthritis, anemia or endometrial
CC   hyperplasia. The present sequence represents a VEGF tyrosine kinase

PT   Novel simple sequence repeats in clover species useful for selection of
PT   genes in legume breeding, for profiling legume species varieties and for
PT   testing the purity of legume seed batches.
XX
PS   Example 1; Page 19; 52pp; English.
XX
CC   The present invention relates to Simple Sequence Repeats (SSRs) from
CC   clover species. SSRs, also called microsatellites, are based on a 1-7
CC   nucleotide core element which is tandemly repeated. The SSR array is
CC   embedded in complex flanking DNA. SSRs are ideal markers for genome
CC   mapping, trait mapping and marker-assisted selection. The SSRs may be
CC   used in methods for selecting genes in clover/ legume breeding. The SSRs
CC   are also useful for DNA profiling of clover varieties and for testing the
CC   purity of legume seed batches. The present sequence is a SSR motif, which
CC   was used in the present invention

PT   New polypeptide human zinc finger protein 9.46 and polynucleotides
PT   encoding this polypeptide.
XX
PS   Example 2; Page 16 (Disclosure); 31pp; Chinese.
XX
CC   The invention relates to human zinc finger protein 9.46 (ABP58904) and
CC   nucleic acids encoding it (ABZ57677). The protein has a molecular weight
CC   of 9.46 kD. The invention also relates to a method for the recombinant
CC   production of the protein, an antagonist of the protein, and the use of
CC   the protein, gene and antagonist in therapeutic applications. Zinc finger
CC   protein 9.46 can be used in the treatment of a variety of diseases such
CC   as malignant tumours, blood diseases, HIV (human immunodeficiency virus)
CC   infection, immune disorders and inflammatory conditions. Sequences
CC   ABZ57678-ABZ57679 represent reverse transcription-PCR (RT-PCR) primers
CC   used in an exemplification of the invention to isolate human zinc finger
CC   protein 9.46 cDNA

PT   New autosomal dominant spinocerebellar ataxia type 1 nucleic acid - used
PT   to develop prods. for detection or presymptomatic diagnosis of a SCA1
PT   disorder.
XX
PS   Example I; Page 37; 111pp; English.
XX
CC   AAQ95132 and M13U are a pair of primers for the PCR amplification of
CC   AAQ84793, a new autosomal dominant spinocerebellar ataxia type 1 (SCA 1)
CC   nucleic acid. The nucleic acid and its protein product (AAR71111) can be
CC   used to develop products, for the presymptomatic detection of a SCA 1
CC   disorder. (Updated on 25-MAR-2003 to correct PN field.)

PT   New nucleic acids other than naturally occurring chromosomes encoding
PT   ASTH1 protein, for e.g. screening compositions that modulate expression
PT   or function of ASTH1 proteins or as diagnostics for genetic
PT   predisposition to asthma.
XX
PS   Example; Col 41-42; 131pp; English.
XX
CC   The invention relates to the ASTH1 locus on the short arm of human
CC   chromosome (11p). This locus comprises the ASTH1I and ASTH1J genes, which
CC   are associated with a genetic predisposition to asthma and bronchial
CC   hyperreactivity. The ASTH1I and ASTH1J genes are oriented in opposite
CC   directions with the ASTH1 locus, and have similar patterns of expression
CC   and common sequence motifs. They are both expressed in trachea, lung and
CC   several other tissues. ASTH1I and ASTH1J are novel members of the ets
CC   family of transcription factors, which have been implicated in the
CC   activation of a variety of genes including the TCRa gene and cytokine
CC   genes known to be important in the aetiology of asthma. Both ASTH1I and
CC   ASTH1J mRNAs are alternatively spliced. Alternative splicing of
CC   transcripts has no effect on the open reading frame of ASTH1J, as the
CC   exons involved are all 5' to the start codon in exon b. In contrast,
CC   alternative splicing of ASTH1I transcripts results in 3 different ASTH1I
CC   isoforms. The invention also encompasses mouse asth1j protein. The ASTH1
CC   nucleic acids are useful as diagnostics to identify a hereditary
CC   predisposition to asthma, as probes for identifying ASTH1 related genes,
CC   for identifying expression of the gene in a biological specimen, and for
CC   generating genetically modified non-human animals or site specific gene
CC   modifications in cell lines. The encoded ASTH1 proteins are useful as
CC   immunogens to raise specific antibodies; in drug screening for
CC   compositions that mimic or modulate activity or expression of ASTH1I
CC   and/or ASTH1J (including altered forms of these proteins); and as a
CC   therapeutic. The ASTH1 genes or fragments thereof, encoded proteins,
CC   ASTH1 genomic regulatory regions, and anti-ASTH1I and anti-ASTH1J
CC   antibodies are useful in the identification of individuals predisposed to
CC   development of asthma, and for modulation of gene activity in vivo for
CC   prophylactic and therapeutic purposes. The intact ASTH1I or ASTH1J
CC   proteins or active fragments thereof may be used to modulate or reduce
CC   bronchial hyperreactivity. Sequences AAA80260-A80261 and AAA80264-A80416
CC   represent polymorphic sites within the ASTH1J or ASTH1I genes

CC   The sequence is that of a bovine microsatellite sequence obtd. by
CC   screening a library of bovine MboI DNA fragments of between 250 and 500
CC   bp with an (AC)15 and a (TC)15 oligonucleotide probe. One out of 50
CC   clones cross-hybridised. Assuming independent distribution of
CC   microsatellites and MboI sites, the frequency of (T6)n >9 microsatellites
CC   in the bovine genome is estimated at >100, 000. The sequence information
CC   for ca. 230 such bovine microsatellites is summarised in the
CC   specification and indexed herein (see below). The sequences upstream and
CC   downstream of the microsatellite sequence were used to generate the
CC   required PCR primers for in vitro amplification of the corresp.
CC   microsatellite (using the program OPTIPRIM). The microsatellites may be
CC   used to identify individuals, for parentage testing, and in the genetic
CC   mapping of economic trait loci, or genes involved the determinism of
CC   economically important traits esp. in cattle, to allow selective
CC   breeding. See also AAQ33501-34437. (Updated on 25-MAR-2003 to correct PN

PT   Synthesis of branched polymers and novel branched polymeric structures -
PT   used as molecular probes esp. for detecting poly-nucleotide(s).
XX
PS   Example 8; Page 33; 52pp; English.
XX
CC   The sequences given in AAQ83938, AAQ83952 and AAQ83940 are used in the
CC   construction of an oligonucleotide clamp. The clamp is a comb-type
CC   branched polymer which has 3' termini and was used to bind a target
CC   sequence comprising a segment of the HIV pol and nef genes in single
CC   stranded or double stranded forms. An oligonucleotide clamp is a compound
CC   capable of forming a covalently closed macromolecule or a stable circular
CC   complex after specifically binding to the target polynucleotide.
CC   Oligonucleotide clamps generally comprise one or more oligonucleotide
CC   moieties capable of specific binding to the target molecule and one or
CC   more pairs of binding moieties covalently linked to the oligonucleotide
CC   moieties. Upon annealing of the oligonucleotides moieties to the target
CC   polynucleotide, the binding moieties of a pair are bought into
CC   juxtaposition so that they form a stable covalent or non-covalent linkage
CC   or complex. The interaction of the binding moieties effectively clamps
CC   the specifically annealed oligonucleotide moieties to the target
CC   polynucleotide. (Updated on 25-MAR-2003 to correct PN field.)

PT   Detection of polymorphic genetic markers of the form (dC-dA)n(dG-dT)n -
PT   using novel nucleic acid mols. as primers.
XX
PS   Disclosure; Col 9-10; 186pp; English.
XX
CC   The invention relates to the isolation of polymorphic repeat sequences
CC   having the sequence (dC-dA)n.(dG-dT)n which can be used as genetic
CC   markers. Primers based on these sequences can be used to detect these
CC   repeats, especially for use in e.g paternity or maternity testing, human
CC   genetic analysis such as linkage analysis of genetic disease, commercial
CC   animal or plant breeding or pedigree analysis. Clones containing the
CC   repeat sequences were isolated by hybridisation of chromosome-specific
CC   phage libraries with a synthetic poly(dC-dA).(dG-dT) probe. Over 100
CC   repeat blocks were isolated. The inserts from the clones were amplified
CC   by primers AAT65798-T66047. Those clones where the repeat sequence has
CC   been determined are shown in AAT65704-797. This repeat sequence is from
CC   the marker clone Mdf25 which contains the repeat sequence having the
CC   formula: (AC)11. (Updated on 25-MAR-2003 to correct PF field.)

PT   Inhibiting angiogenesis comprises administration of PPAR gamma ligands
PT   for treating tumors, neovascularization and rheumatoid arthritis.
XX
PS   Example 5; Page 31; 52pp; English.
XX
CC   Peroxisome proliferators are agents that induce peroxisomal
CC   proliferation. Peroxisome proliferator-activated receptors (PPARs) are
CC   members of the steroid receptor superfamily, and are ligand-activated
CC   transcription factors. There are three mammalian subtypes of PPAR, alpha,
CC   beta (also known as delta) and gamma. The present invention relates to
CC   inhibiting angiogenesis by contacting PPAR gamma with a PPAR gamma
CC   ligand. This method may be used to treat tumours, and diseases
CC   characterised by excessive neovascularisation e.g. rheumatoid arthritis,
CC   psoriasis, atherosclerosis, diabetes, retinopathy, retrolental
CC   fibroplasia, neovascular glaucoma, age-related macular degeneration,
CC   hemangiomas, thyroid hyperplasias, Grave's disease, tissue
CC   transplantation, chronic inflammation, lung inflammation, endometriosis
CC   and obesity. The present sequence is a PCR primer for human Flt-1 gene.
CC   Flt-1 is an endothelial cell tyrosine kinase receptor for vascular
CC   endothelial growth factor (VEGF) and has an important role in
CC   angiogenesis. The present sequence was used to determine whether
CC   PPARgamma activation leads to an alteration in Flt-1 gene expression and
CC   hence angiogenesis. An increase in Flt-1 levels was found after PPARgamma
CC   activation

PT   Composition containing immune stimulant and inhibitor of agent that
PT   adversely affects the immune response, for treating cancers and
PT   infections.
XX
PS   Claim 10; Fig 1; 30pp; English.
XX
CC   This sequence is an immunosuppressant inhibitor oligonucleotide, which is
CC   used in the invention. The invention relates to a composition which
CC   contains at least one inhibitor (less than 100 kD) of a substance (e.g.
CC   transforming growth factor TGF-beta, vascular endothelial growth factor
CC   VEGF, interleukin-10 IL-10, prostaglandin E2 PGE2, or their receptors)
CC   that adversely affects the immune response. The composition also includes
CC   at least one stimulant that positively affects the immune response. This
CC   oligonucleotide is an example of an inhibitor that is used in the
CC   composition. The composition is used as an immunostimulant for the
CC   treatment of neoplasms and infections, particularly hyperproliferation;
CC   leukaemia; (non-)Hodgkin's lymphoma; carcinoma (of oesophagus, bronchi,
CC   colon-rectum, stomach, intestine, gall bladder or duct, pancreas, anus,
CC   breast, ovary, cervix, endometrium, prostate or bladder), liver tumours,
CC   malignant melanoma, brain tumours and sarcomas. The oligonucleotides,
CC   most of which are directed against TGFbeta or VEGF, are inhibitors of
CC   monocyte chemotactic protein-1 (MCP-1) and are useful as anti-
CC   inflammatories for treating e.g. asthma, Crohn's disease, ulcerative
CC   colitis, diabetes, glomerulonephritis, acute respiratory distress
CC   syndrome and the formation of atherosclerotic plaque

PT   Modulating angiogenesis and/or apoptosis for preventing or treating
PT   cancer, myocardial infarction and promoting healing, by modulating the
PT   activity of vascular endothelial growth factor-modulated gene
PT   polypeptide.
XX
PS   Example 2; Page 103; 155pp; English.
XX
CC   The invention relates to modulating angiogenesis and cell survival that
CC   involves modulating the activity of at least one vascular endothelial
CC   growth factor (VEGF)-modulated gene polypeptide. The method is useful for
CC   modulating angiogenesis and cell survival, for treating tumour and cancer
CC   by decreasing angiogenesis in cancerous tumours and treating myocardial
CC   infarction and promoting healing, by increasing angiogenesis. Transgenic
CC   non-human animals, having disrupted arginine-rich protein (ARP), are
CC   useful for determining the clinical stage of ovarian tumorous, which is
CC   useful for determining if the tumour has potential for metastasis. ARP is
CC   useful in gene therapy and in diagnostic applications. VEGFmg proteins
CC   are useful in the treatment of tumours, neoplasias, hemangiomas,
CC   rheumatoid arthritis, atherosclerosis, idiopathic pulmonary fibrosis,
CC   vascular restenosis, arteriovenous malformations, meningioma, neovascular
CC   glaucoma, psoriasis, hemophilic joints, hypertrophic scars, Osler-Weber
CC   syndrome, scleroderma, vascular adhesion pathologies, synovitis,
CC   dermatitis, endometriosis, diabetic retinopathy, neovascularization
CC   associated with corneal injury or grafts, wound, sore, and ulcer healing.
CC   Sequences AAI67449-487 represent probe primer sets used for real-time RT-
CC   PCR analysis of differential gene expression

PT   Novel simple sequence repeats in clover species useful for selection of
PT   genes in legume breeding, for profiling legume species varieties and for
PT   testing the purity of legume seed batches.
XX
PS   Claim 6; Page 35; 52pp; English.
XX
CC   The present invention relates to Simple Sequence Repeats (SSRs) from
CC   clover species. SSRs, also called microsatellites, are based on a 1-7
CC   nucleotide core element which is tandemly repeated. The SSR array is
CC   embedded in complex flanking DNA. SSRs are ideal markers for genome
CC   mapping, trait mapping and marker-assisted selection. The SSRs may be
CC   used in methods for selecting genes in clover/ legume breeding. The SSRs
CC   are also useful for DNA profiling of clover varieties and for testing the
CC   purity of legume seed batches. The present sequence is a SSR motif, which
CC   was used in the present invention

PT   Typing genes that contain polymorphic microsatellite loci, useful for
PT   identifying predisposition to disease, by amplification and determining
PT   length of amplicons.
XX
PS   Claim 9; Page 50; 64pp; German.
XX
CC   The invention describes a method of typing (M1) a gene (I) that has one
CC   or more polymorphic microsatellite loci (PML). The method comprises: PCR
CC   amplification of at least one DNA region of (I) that includes PML, using
CC   as template a DNA sample containing at least one segment of (I); and
CC   determining the length of the resulting amplicon(s). Also described are:
CC   a method of determining (M2) microsatellite markers (MM) for
CC   predisposition to a disease, associated with a gene that includes one or
CC   more PML; and prediagnosis (M3) of diseases associated with gene that
CC   include PML. The method is used to identify microsatellite markers, in a
CC   disease-related gene, that are associated with a predisposition to
CC   diseases and for prediagnosis of such diseases, especially prion diseases
CC   but also cystic fibrosis, malignant hyperthermia syndrome in pigs and
CC   metabolic diseases; also to type genes that encode milk proteins,
CC   hormones or transcription factors. The method is simpler, quicker and
CC   particularly less expensive than known methods based on sequencing. This
CC   sequence represents a prion protein polymorphic microsatellite marker
CC   consensus sequence.

PT   New polypeptides, specifically isoforms of cell surface receptors, such
PT   as EphA, VEGF, MET, RON, CSF, etc, useful treating cancer, or
PT   inflammatory, infectious, angiogenesis-related conditions, or immune
PT   disorders.
XX
PS   Example 1; SEQ ID NO 65; 647pp; English.
XX
CC   The invention describes an isolated polypeptide, comprising at least one
CC   domain of an EphA or EphB receptor, where the polypeptide comprises an
CC   ephrin ligand binding domain and the polypeptide lacks one or more amino
CC   acids corresponding to the transmembrane domain of the EphA or EphB
CC   receptor where the membrane localization of the polypeptide is reduced or
CC   abolished compared to the EphA or EphB receptor. The polypeptides,
CC   compositions, molecules and methods are useful for treating cancers,
CC   inflammatory diseases, infectious diseases angiogenesis-related
CC   conditions (conditions involving angiogenesis), cell proliferation-
CC   related conditions, conditions involving hyperproliferation of cells,
CC   immune disorders and neurodegenerative diseases. The disease or condition
CC   is selected from rheumatoid arthritis, multiple sclerosis, posterior
CC   intraocular inflammation, uveitic disorders, ocular surface inflammatory
CC   disorders, neovascular disease, proliferative vitreoretinopathy,
CC   atherosclerosis, rheumatoid arthritis, hemangioma, diabetes mellitus,
CC   inflammatory bowel disease, psoriasis, Alzheimer's disease, lupus,
CC   vascular stenosis, restenosis, inflammatory joint disease,
CC   atherosclerosis, urinary obstructive syndromes, and asthma. The disease
CC   or condition is selected from carcinoma, lymphoma, blastoma, sarcoma,
CC   leukemia, lymphoid malignancies, squamous cell cancer, small-cell lung
CC   cancer, non-small cell lung cancer, adenocarcinoma of the lung, squamous
CC   carcinoma of the lung, cancer of the peritoneum, hepatocellular cancer,
CC   gastric cancer, stomach cancer, gastrointestinal cancer, pancreatic
CC   cancer, glioblastoma, cervical cancer, ovarian cancer, liver cancer,
CC   bladder cancer, hepatoma, breast cancer, colon cancer, rectal cancer,
CC   colorectal cancer, endometrial or uterine carcinoma, salivary gland
CC   carcinoma, kidney/renal cancer, prostate cancer, vulval cancer, thyroid
CC   cancer, hepatic carcinoma, anal carcinoma, penile carcinoma, and head and
CC   neck cancer. The disease or condition includes infection by a virus or a
CC   parasite. The virus is selected from Myxoma virus, Vaccinia virus,
CC   Tanapox virus, Epstein-Barr virus, Herpes simplex virus, Cytomegalovirus,
CC   Herpesvirus saimiri, Hepatitis B virus, African swine fever virus,
CC   Parovirus, Human Immune deficiency virus (HIV), Hepatitis C virus,
CC   Influenza virus, Respiratory syncytial virus, Measles virus, Vesicular
CC   stomatitis virus, Dengue virus and Ebola virus. The combination is useful
CC   for treating angiogenic-related disorder, a tumor and/or an immune
CC   disorder. This sequence represents a primer for isolation of DNA encoding
CC   a cell surface receptor isoform polynucleotide.

PT   haplotype, useful for treating inflammation, comprises detecting an IL-1
PT   allele.
XX
PS   Claim 18; Fig 10A; 96pp; English.
XX
CC   This invention relates to the identification and use of genetic
CC   information from the human interleukin 1 (IL-1) gene cluster including
CC   the structure and organisation of novel IL-1 like genes found within the
CC   IL-1 locus as well as polymorphisms (single nucleotide polymorphisms;
CC   SNPs) and associated haplotypes within these genes. The invention also
CC   relates to the use of these polymorphisms and haplotypes for predicting
CC   IL-1 associated phenotypes (for example increased or decreased risk of
CC   inflammatory disease) and for treating IL-1 associated inflammatory
CC   phenotypes. IL-1 is a primary inflammatory cytokine and has been
CC   implicated in mediating both acute and chronic pathological inflammatory
CC   diseases. Two functionally similar molecules, IL-1 alpha and IL-1 beta,
CC   are encoded by genes IL1A and IL1B. A third gene of the family (IL1RN)
CC   encodes IL-1 receptor antagonist (IL-1RA), an anti-inflammatory non-
CC   signalling molecule that competes for receptor binding with IL-1 alpha
CC   and IL-1 beta. The IL-1 gene cluster is on the long arm of chromosome 2
CC   (2q13). Compounds which modulate the activity of IL-1 alpha, IL-1 beta or
CC   IL-1RA may have antiinflammatory, antiarthritic, hepatotropic or
CC   osteopathic activity. In addition, the sequences encoding the IL-1
CC   proteins may be useful for gene therapy. The methods and polynucleotide
CC   sequence may be useful for diagnosing and treating an inflammatory
CC   disease, for example arthritis, hepatic inflammation, chronic obstructive
CC   pulmonary disease and osteoporosis. The present sequence is that of the
CC   region surrounding and including a single nucleotide polymorphism of the
CC   invention in the human IL1RN gene.

PT   Novel CD45 negative and CXCR4 positive stem cells derived from adult
PT   tissue, useful for prophylaxis and/or treatment of diseases involving
PT   tissue disintegration such as neurological and respiratory diseases.
XX
PS   Example 1; SEQ ID NO 7; 57pp; Japanese.
XX
CC   This invention describes a novel pluripotent stem cell derived from an
CC   adult tissue which is CD45 negative and CXCR4 positive. The novel cells
CC   are extracted from human bone marrow, skin, skeletal muscle, fat tissue
CC   or peripheral blood by collagenase treatment and separated using anti-
CC   CD45, anti-CD34 and anti-Ter119 antibodies. The stem cells can be used as
CC   preventative and/or therapeutic agents for diseases involving tissue
CC   disintegration. Proliferating the stem cells involves culturing the cells
CC   in a culture medium containing fibronectin and macrophage colony
CC   stimulating factor (M-CSF) and/or leukemia inhibiting factor (LIF). The
CC   products of the invention have neuroprotective, antiparkinsonian,
CC   antiasthmatic, hepatotropic, virucide, antidiabetic, antiulcer, general
CC   gastrointestinal, general respiratory, cardiant, nephrotropic,
CC   antiinflammatory and dermatological activity. The invention is useful for
CC   prophylaxis and/or treatment of diseases involving tissue disintegration
CC   such as neurological disease e.g. Parkinson's disease, respiratory
CC   disease e.g. asthma, circulatory disease e.g. myocardial infarction,
CC   liver disease e.g. hepatitis, pancreatic disease e.g. diabetes, digestive
CC   tract disease e.g. ulcerative colitis, kidney disease e.g. nephritis and
CC   dermatological disorders e.g. bedsores. This sequence represents a PCT
CC   primer used to amplify the Flt-1 gene, which is associated with the
CC   method of the invention.

PT   Novel CD45 negative and CXCR4 positive stem cells derived from adult
PT   tissue, useful for prophylaxis and/or treatment of diseases involving
PT   tissue disintegration such as neurological and respiratory diseases.
XX
PS   Example 1; SEQ ID NO 6; 57pp; Japanese.
XX
CC   This invention describes a novel pluripotent stem cell derived from an
CC   adult tissue which is CD45 negative and CXCR4 positive. The novel cells
CC   are extracted from human bone marrow, skin, skeletal muscle, fat tissue
CC   or peripheral blood by collagenase treatment and separated using anti-
CC   CD45, anti-CD34 and anti-Ter119 antibodies. The stem cells can be used as
CC   preventative and/or therapeutic agents for diseases involving tissue
CC   disintegration. Proliferating the stem cells involves culturing the cells
CC   in a culture medium containing fibronectin and macrophage colony
CC   stimulating factor (M-CSF) and/or leukemia inhibiting factor (LIF). The
CC   products of the invention have neuroprotective, antiparkinsonian,
CC   antiasthmatic, hepatotropic, virucide, antidiabetic, antiulcer, general
CC   gastrointestinal, general respiratory, cardiant, nephrotropic,
CC   antiinflammatory and dermatological activity. The invention is useful for
CC   prophylaxis and/or treatment of diseases involving tissue disintegration
CC   such as neurological disease e.g. Parkinson's disease, respiratory
CC   disease e.g. asthma, circulatory disease e.g. myocardial infarction,
CC   liver disease e.g. hepatitis, pancreatic disease e.g. diabetes, digestive
CC   tract disease e.g. ulcerative colitis, kidney disease e.g. nephritis and
CC   dermatological disorders e.g. bedsores. This sequence represents a PCT
CC   primer used to amplify the Flt-1 gene, which is associated with the
CC   method of the invention.

PT   Determining whether a subject carries a Cystic Fibrosis Transmembrane
PT   Conductance Regulator (CFTR) gene mutation comprises contacting an array
PT   comprising distinct nucleic acid CFTR gene mutation probes with a nucleic
PT   acid sample.
XX
PS   Disclosure; SEQ ID NO 185; 52pp; English.
XX
CC   The invention describes methods for determining whether a subject carries
CC   a Cystic Fibrosis Transmembrane Conductance Regulator (CFTR) gene
CC   mutation comprising use of a nucleic acid array of CFTR gene mutation
CC   probes. Also described are: determining (M1) whether a subject carries a
CC   Cystic Fibrosis Transmembrane Conductance Regulator (CFTR) gene mutation,
CC   comprising: contacting an array of distinct nucleic acid CFTR gene
CC   mutation probes with a sample; contacting the sample-contacted array with
CC   a polymerase and at least two distinguishably labeled dideoxynucleotides
CC   under primer extension conditions; and detecting the presence of any
CC   resultant terminally labeled nucleic acids immobilized on the array to
CC   determine whether the subject carries a CFTR mutation; determining (M2)
CC   whether a subject carries a Cystic Fibrosis Transmembrane Conductance
CC   Regulator (CFTR) gene mutation, comprising: contacting an array of at
CC   least 50 distinct nucleic acid CFTR gene mutation probes with a sample;
CC   and detecting the presence of any target nucleic acids immobilized on the
CC   array to determine whether the subject carries a CFTR mutation; an array
CC   comprising at least 50 distinct nucleic acid CFTR gene mutation probes
CC   immobilized on a solid support; and a kit for use in detecting a CFTR
CC   mutation comprising the array and at least two distinguishably labeled
CC   dideoxynucleotides (ddNTPs). The methods are useful in determining
CC   whether a subject carries a Cystic Fibrosis Transmembrane Conductance
CC   Regulator (CFTR) gene mutation. The method allows simultaneous screening
```

```
CC   for large numbers of distinct CFTR mutations and is suitable for routine
CC   CF carrier screening. This sequence represents a probe used to detect
CC   mutations in the CFTR gene.

PT   Identifying a subject having increased IL-1B transcription, for
PT   identifying if the subject is predisposed to periodontal disease, by
PT   providing a biological sample comprising genomic DNA, and identifying an
PT   IL-1B allele in the sample.
XX
PS   Example 8; Page 70; 126pp; English.
XX
CC   The invention relates to a method of identifying a subject having
CC   increased IL-1B transcription providing a biological sample comprising
CC   genomic DNA from the subject, and identifying an IL-1B allele selected
CC   from IL-1B (-3737) allele 1 and/or IL-1B (-1468) allele 1 in the sample,
CC   where the presence of the allele indicates that the subject has increased
CC   IL-1B transcription. The methods are useful for identifying if the
CC   subject is predisposed to periodontal disease, and as assays for
CC   identifying therapeutics for treating and/or preventing the development
CC   of the disease. The present sequence represents a human interleukin (IL)-
CC   1RNic SNP fragment DNA.

PT   Novel antisense oligonucleotides useful for inhibiting vascular
PT   endothelial growth factor expression, angiogenesis and for treating
PT   cancer, e.g., Kaposi's sarcoma, ovarian cancer and prostrate cancer.
XX
PS   Example 12; Page 56; 105pp; English.
XX
CC   The invention provides a composition comprising one or more antisense
CC   oligonucleotides directed against vascular endothelial growth factor
CC   (VEGF) where the antisense oligonucleotides inhibits proliferation of
CC   cells exhibiting autocrine VEGF activity at an IC_5_0 concentration of
CC   between 0.5-2.5 micro Ma. The antisense oligonucleotides may be directed
CC   against VEGF for inhibiting cancer cell proliferation and angiogenesis.
CC   Preferably the oligonucleotide AAH23032 (a modified version of AAH22984)
CC   is used and may be utilized to treat Kaposi's sarcoma, ovarian cancer,
CC   prostrate cancer, pancreatic cancer or melanoma. Sequences AAH23012-023
CC   represent gene-specific primers used in RT-PCR amplification of VEGF
CC   receptors

PT   Agents promoting or suppressing neovascularization containing activin
PT   stimulator or activin inhibitor, to treat ischemic conditions, diabetes
PT   and skin ulcers, or rheumatoid arthritis, diabetic retinopathy and
PT   cancer, etc.
XX
PS   Example 2; SEQ ID NO 5; 37pp; Japanese.
XX
CC   The present invention describes a neovascularisation agent (I), which has
CC   an activin stimulator as an active component. Also described: (1) an anti
CC   -neovascularisation agent (II) containing an activin inhibitor as an
CC   active component; and (2) a neovascularisation regulator comprising (I)
CC   and (II). The neovascularisation agent (I) can be used to prevent or
CC   treat ischaemic conditions, atherosclerosis, occlusive arteriosclerosis,
CC   lower limb vascular occlusion, myocardial infarction, angina pectoris,
CC   cerebral embolism, recalcitrant skin ulcers; and diabetes, through
CC   pancreatic islet cell regeneration. The anti-neovascularisation agent
CC   (II) can be used to prevent or treat diabetic retinopathy, senile macular
CC   degeneration, chronic rheumatoid arthritis, cancer, psoriasis vulgaris.
CC   The present sequence represents a PCR primer for Flt-1, which is used in
CC   an example from the present invention.

PT   Kit for diagnozing and treating T-cell associated diseases e.g.
PT   autoimmune, degenerative nervous system and infectious disease, comprises
PT   nucleic acid primers specifically priming and allowing amplification of a
PT   Vbeta gene.
XX
PS   Disclosure; SEQ ID NO 774; 164pp; English.
XX
CC   The invention relates to a kit for diagnosing and treating T-cell
CC   associated diseases which comprises a panel of nucleic acid primers
CC   specifically priming and allowing amplification of each Vbeta gene,
CC   VbetaRNA or cDNA. The kit is useful for diagnosing organ transplant
CC   rejection and diagnosing and treating T-cell associated diseases
CC   including autoimmune diseases, degenerative nervous system diseases,
CC   graft versus host disease, hypersensitivity diseases, infectious diseases
CC   and neoplastic diseases. Autoimmune diseases include Addison's disease,
CC   atrophic gastritis. Degenerative nervous system diseases include multiple
CC   sclerosis and Alzheimer's disease. Hypersensitivity diseases include Type
CC   I hypersensitivities such as contact with allergens that lead to
CC   allergies, Type II hypersensitivities such as those present in
CC   Goodpasture's syndrome and Type IV hypersensitivities such as those
CC   manifested in leprosy. Infectious diseases include viral infections
CC   caused by viruses such as HIV, fungal infections such as those caused by
CC   the yeast genus Candida, parasitic infections such as those caused by
CC   schistosomes, filaria and bacterial infections such as those caused by
CC   Mycobacterium. Neoplastic diseases include lymphoproliferative diseases
CC   such as leukaemias, lymphomas and cancers such as cancer of the brain,
CC   breast. The present sequence represents a Vbeta gene repeat sequence.

PT   Angiogenesis-inhibiting chimeric recombinant proteins and their encoded
PT   DNA sequences, useful in producing pharmaceutical compositions for drugs
PT   to inhibit angiogenesis and to treat e.g. tumor.
XX
PS   Example 1; Page 8; 31pp; Chinese.
XX
CC   The invention relates to chimeric proteins constructed from various
CC   fragments of FLT-1 (fms-like tyrosine kinase) and KDR, which are tyrosine
CC   kinase receptors of VEGF (vascular endothelial growth factor). The
CC   proteins and their encoded DNA sequences are useful in producing
CC   pharmaceutical compositions for drugs to inhibit angiogenesis and to
CC   treat e.g. tumor, diabetic retinopathy, arthritis, anemia or endometrial
CC   hyperplasia. The present sequence represents a VEGF tyrosine kinase
CC   receptor related protein PCR primer.

PT   FLT receptor derived vascular endothelial growth factor inhibitor -
PT   contains the first and second immunoglobulin like domains of the FLT
PT   extracellular region, but not the sixth and seventh.
XX
PS   Disclosure; Page 7; 83pp; Japanese.
XX
CC   The present sequence is a primer used in the preparation of DNA encoding
CC   an amino-terminal fragment of the vascular endothelial growth factor
CC   (VEGF) FLT receptor, which contains the 1st and 2nd immunoglobulin (Ig)
CC   like domains of the FLT extracellular region, but not the 6th and 7th Ig
CC   like domains. The fragment can be used to treat disorders associated with
CC   excessive endothelial cell proliferation or neovascularisation, e.g.
CC   solid cancers. Diagnostic reagents may contain the fragment, or
CC   antibodies raised against it. The fragment is much more soluble than full
CC   length FLT and binds VEGF effectively, resulting in VEGF inhibition
CC   without signal transduction. (Updated on 25-MAR-2003 to correct PA
CC   field.)

PT   Vascular endothelial growth factor binding polypeptide(s) - used in the
PT   treatment of solid tumours etc.
XX
PS   Disclosure; Page 12; 19pp; Japanese.
XX
CC   Primers AAV01458-V01459 were used to amplify the sequence encoding the
CC   extracellular domain of VEGF (vascular endothelial cell growth factor)
CC   receptor FLT (AAV01457). The VEGF receptor sequence can be used to
CC   generate truncated mutants which comprise the immunoglobulin-like domains
CC   1-3, 1-4, 1-5 or 1-7. The polypeptides can be used in treatment of solid
CC   tumours and other diseases accompanied by pathological vascularisation
CC   since they inhibit vascularisation by stimulation with VEGF

XX
CC   Sequences AAH37205 - AAH40944 represent PCR primers, single nucleotide
CC   primer extension (SNPE) primers, and the sequences of regions flanking
CC   sites of single nucleotide polymorphisms SNPs. The present invention
CC   includes kits for determining the presence or absence of a SNP, using the
CC   oligonucleotides of the invention. The PCR primers are used to amplify a
CC   SNP flanking sequence, the SNPE primer is used as a genotyping primer.
CC   The oligonucleotides are useful for genotyping a nucleic acid sample by
CC   performing a single-nucleotide primer extension reaction. The
CC   oligonucleotides are useful for determining the presence, absence or
CC   identity of a SNP and for genotyping nucleic acid samples, for e.g. to
CC   assess by association analysis the genotype of an individual or group of
CC   individuals, having a pathological phenotypic trait suspected of being
CC   caused by one or more SNPs. Phenotypic traits include diseases e.g.
CC   agammaglobulinaemia, diabetes insipidus, Lesch-Nyhan syndrome, muscular
CC   dystrophy, familial hypercholesterolaemia, polycystic kidney disease,
CC   osteogenesis imperfecta and acute intermittent porphyria. Phenotypic
CC   traits also include symptoms of or susceptibility to multifactorial
CC   disease of which a component is or may be genetic such as autoimmune
CC   diseases, including, rheumatoid arthritis, multiple sclerosis,
CC   inflammation, cancer, nervous system diseases and infection by pathogenic
CC   microorganism. The method is also useful in forensic investigations and
CC   paternity analysis. The present sequence represents a PCR primer specific
CC   for a human SNP containing DNA sequence

PT   Diagnosing prostate cancer comprises detecting in a patient sample the
PT   presence or absence of an expression product of a human endogenous
PT   retrovirus (PCAV) located at megabase 20.428 on chromosome 22.
XX
PS   Claim 13; SEQ ID NO 736; 209pp; English.
XX
CC   The invention relates to diagnosing prostate cancer comprises detecting
CC   in a patient sample the presence or absence of an expression product of a
CC   human endogenous retrovirus (PCAV) located at megabase 20.428 on
CC   chromosome 22. PCAV is a HERV-K family retrovirus and has Alu sequence
CC   interrupting the env gene, a unique gag sequence a MER11a insertion
CC   element , 2 tandem 5' LTRs (long terminal repeat) and a fragmented 3'
CC   LTR. Also included are cDNAs, mRNAs, genes, polypeptides, transcription
CC   units, splice junction sequences and splice acceptor/donor sequences
CC   derived or expressed from PCAV, primer/probes for PCAV, an antibody that
CC   binds to the polypeptide, a pharmaceutical composition comprising the
CC   nucleic acid, polypeptide or antibody and a carrier, raising an immune
CC   response in a patient and screening for compounds with activity against
CC   cancer or prostate cancer. The method is useful for diagnosing or raising
CC   an immune response against prostate cancer. The present sequence is a
CC   PCAV sequence suitable for use as a PCR primer or probe.

PT   New set of inter-simple sequence repeats (ISSR)-PCR primers for
PT   genotyping eukaryotes, useful for genotyping diverse genomes of plant and
PT   animal systems.
XX
PS   Claim 1; Page 17; 60pp; English.
XX
CC   The invention relates to a novel set of inter-simple sequence repeats
CC   (ISSR)-PCR primers for genotyping eukaryotes. The primers of the
CC   invention may be useful for genotyping diverse genomes of plant and
CC   animal systems, in particular for distinguishing Basmati rice varieties
CC   from non-Basmati rice varieties and traditional Basmati rice varieties
CC   from evolved Basmati rice varieties. The current sequence is that of the
CC   5' anchored (ISSR)-PCR primer of the invention.

XX
CC   The invention relates to the isolation of polymorphic repeat sequences
CC   having the sequence (dC-dA)n.(dG-dT)n which can be used as genetic
CC   markers. Primers based on these sequences can be used to detect these
CC   repeats, especially for use in e.g paternity or maternity testing, human
CC   genetic analysis such as linkage analysis of genetic disease, commercial
CC   animal or plant breeding or pedigree analysis. Clones containing the
CC   repeat sequences were isolated by hybridisation of chromosome-specific
CC   phage libraries with a synthetic poly(dC-dA).(dG-dT) probe. Over 100
CC   repeat blocks were isolated. The inserts from the clones were amplified
CC   by primers AAT65798-T66047. Those clones where the repeat sequence has
CC   been determined are shown in AAT65704-797. This repeat sequence is from
CC   the marker clone Mdf37 which contains the repeat sequence having the
CC   formula: (AC)10A. (Updated on 25-MAR-2003 to correct PF field.)

PT   FLT receptor derived vascular endothelial growth factor inhibitor -
PT   contains the first and second immunoglobulin like domains of the FLT
PT   extracellular region, but not the sixth and seventh.
XX
PS   Disclosure; Page 7; 83pp; Japanese.
XX
CC   The present sequence is a primer used in the preparation of DNA encoding
CC   an amino-terminal fragment of the vascular endothelial growth factor
CC   (VEGF) FLT receptor, which contains the 1st and 2nd immunoglobulin (Ig)
CC   like domains of the FLT extracellular region, but not the 6th and 7th Ig
CC   like domains. The fragment can be used to treat disorders associated with
CC   excessive endothelial cell proliferation or neovascularisation, e.g.
CC   solid cancers. Diagnostic reagents may contain the fragment, or
CC   antibodies raised against it. The fragment is much more soluble than full
CC   length FLT and binds VEGF effectively, resulting in VEGF inhibition
CC   without signal transduction. (Updated on 25-MAR-2003 to correct PA
CC   field.)

XX
CC   Primers AAV01458-V01459 were used to amplify the sequence encoding the
CC   extracellular domain of VEGF (vascular endothelial cell growth factor)
CC   receptor FLT (AAV01457). The VEGF receptor sequence can be used to
CC   generate truncated mutants which comprise the immunoglobulin-like domains
CC   1-3, 1-4, 1-5 or 1-7. The polypeptides can be used in treatment of solid
CC   tumours and other diseases accompanied by pathological vascularisation
CC   since they inhibit vascularisation by stimulation with VEGF

PT   Monoclonal antibody against human VEGF receptor Flt-1 - inhibits binding
PT   of vascular endothelial growth factor to its receptor and is suitable for
PT   diagnosis and treatment of diseases involving abnormal vascularisation.
XX
PS   Disclosure; Page 36; 57pp; Japanese.
XX
CC   AAV35478-V35481 are primers used in a method resulting in the isolation
CC   of a monoclonal antibody (Mab) which recognise the human vascular
CC   endothelial growth factor (VEGF) receptor Flt-1 or epitopes contained in
CC   the first 750 residues (especially the first 338 residues) from the N-
CC   terminal of the receptor protein, and which bind with the Flt-1 receptor
CC   of immune cells. The antibodies inhibit the binding of human VEGF to the
CC   Flt-1 receptor and are useful in the diagnosis and treatment of diseases
CC   involving abnormal vascularisation, such as the propagation and
CC   metastasis of solid tumours, chronic rheumatoid arthritis, diabetic
CC   retinopathy, retinopathy of prematurity, and psoriasis

XX
CC   This sequence is a PCR primer for the human flt-#3-7 coding sequence. The
CC   invention relates to a drug that comprises a combination of: (1) a
CC   substance inhibiting signal transduction mediated by the human vascular
CC   endothelial growth factor (VEGF) receptor fms-like tyrosine kinase-1 (Flt
CC   -1); and (2) a substance inhibiting signal transduction mediated by the
CC   human VEGF receptor kinase insert domain-containing receptor (KDR). The
CC   drug compositions are useful in diagnosis or treating diseases due to
CC   abnormal neovascularisation such as proliferation or metastasis of solid
CC   tumours, arthritis in rheumatoid arthritis, diabetic retinopathy,
CC   premature retinopathy and psoriasis. The compositions have enhanced
CC   efficacy

XX
CC   The present sequence is that of a synthetic oligonucleotide useful to the
CC   invention. The invention relates to a composition, comprising a 2 to 20
CC   base 3'-OH, 5'-OH synthetic oligonucleotide which comprises multiple
CC   repeats of dinucleotides such as GT, TG, etc., according to specific
CC   formula and having cytostatic activity. The oligonucleotide compositions
CC   are useful for inducing cell cycle arrest, inhibition of proliferation,
CC   activation of caspases and induction of apoptosis or production of
CC   cytokines such as interleukin (IL)-1-beta, IL-6, IL-10, IL-12 and tumour
CC   necrosis factor (TNF)-alpha by immune system cells, in an animal having
CC   cancer such as primary carcinoma, secondary carcinoma, primary sarcoma
CC   and secondary sarcoma such as, leukemia, lymphoma, breast, prostate,
CC   colorectal, ovarian or bone cancer. The compositions induce apoptosis
CC   independent of Fas, p53/p21, p21/waf-1/CIP, p15(ink4B), p16(ink4), drug
CC   resistance, caspase 3, transforming growth factor (TGF)-beta 1 receptor
CC   and hormone dependence

XX
CC   The present sequence is that of a synthetic oligonucleotide useful to the
CC   invention. The invention relates to a composition, comprising a 2 to 20
CC   base 3'-OH, 5'-OH synthetic oligonucleotide which comprises multiple
CC   repeats of dinucleotides such as GT, TG, etc., according to specific
CC   formula and having cytostatic activity. The oligonucleotide compositions
CC   are useful for inducing cell cycle arrest, inhibition of proliferation,
CC   activation of caspases and induction of apoptosis or production of
CC   cytokines such as interleukin (IL)-1-beta, IL-6, IL-10, IL-12 and tumour
CC   necrosis factor (TNF)-alpha by immune system cells, in an animal having
CC   cancer such as primary carcinoma, secondary carcinoma, primary sarcoma
CC   and secondary sarcoma such as, leukemia, lymphoma, breast, prostate,
CC   colorectal, ovarian or bone cancer. The compositions induce apoptosis
CC   independent of Fas, p53/p21, p21/waf-1/CIP, p15(ink4B), p16(ink4), drug
CC   resistance, caspase 3, transforming growth factor (TGF)-beta 1 receptor
CC   and hormone dependence

PT   Vaccinating against tumors, infectious diseases, allergies and asthma
PT   using immunostimulatory Py-rich and TG nucleic acids.
XX
PS   Claim 101; Page 56; 338pp; English.
XX
CC   The present invention relates to a method for stimulating an immune
CC   response. The method comprises administering an immunostimulatory nucleic
CC   acid to a non-rodent subject in sufficient quantity to stimulate an
CC   immune response. The present sequence is one such immunostimulatory
CC   nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich
CC   (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects
CC   against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae
CC   and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma,
CC   haemophilus, campylobacter, clostridium, Escherichia coli and/or
CC   staphylococcus), fungal antigens and/or parasitic antigens. The method is
CC   also useful for preventing cancer, asthma, infectious disease, allergy or
CC   immune deficiency. The present sequence can also be used to redirect a
CC   Th2 to a Th1 immune response and to activate immune cells. Note: the
CC   present sequence may have a phosphorothioate backbone

PT Inhibiting growth of non-solid tumor cells useful to treat bone marrow
PT tumors such as leukemias or multiple myeloma comprises treatment with an
PT antagonist of a vascular endothelial growth factor receptor.
XX
PS Example 1; Page 23; 68pp; English.
XX
CC The invention relates to a method for inhibiting the growth of non-solid
CC tumour cells that are stimulated by a ligand of vascular endothelial
CC growth factor receptor (VEGFR) in mammals particularly humans. The method
CC involves treating the mammals with humanised VEGFR monoclonal antibodies
CC (antagonists). Humanised monoclonal antibody comprises humanised mouse
CC variable region joined to human constant region, where the humanised
CC mouse variable region contains mouse complementarity determining region
CC (CDR) grafted into human variable region. The method is useful for
CC treating leukaemias such as acute or chronic myelocytic leukaemia, acute
CC or chronic lymphocytic leukaemia, erythrocytic or monocytic leukaemia,
CC multiple myelomas and lymphoid cells, particularly those related to non-
CC Hodgkin's and Hodgkin's disease. The present DNA sequence is a reverse
CC PCR primer which is used for amplifying vascular endothelial growth
CC factor receptor-1 (VEGFR-1) DNA used in the exemplification of the
CC invention

PT   Prevention or reduction of the growth of tumor cells expressing
PT   functional vascular endothelial growth factor-1 receptors, comprises use
PT   of a vascular endothelial growth factor-1 receptor antagonist.
XX
PS   Example 1; Page 15; 31pp; English.
XX
CC   The present invention describes a method for the prevention or reduction
CC   of the growth of tumour cells expressing functional vascular endothelial
CC   growth factor (VEGF)-1 receptors (VEGFR-1) comprising administration of a
CC   VEGFR-1 antagonist to a mammal. VEGFR-1 antagonists have cytostatic
CC   activity, and can be used as autocrine stimulation inhibitors. VEGFR-1
CC   antagonists can be used for preventing or reducing the growth of tumour
CC   cells from substantially non-vascularised cancer such as breast cancer,
CC   ovarian cancer, brain cancer, kidney cancer, bladder cancer,
CC   adenocarcinoma, malignant gliomas and leukaemias in mammal e.g. human.
CC   The VEGFR-1 antagonist binds specifically to the extracellular domain of
CC   a VEGFR expressed on the tumour cell. The VEGFR-1 antagonist inhibits
CC   angiogenesis, hence inhibits tumour growth at low concentration. The
CC   present sequence represents a PCR primer for VEGFR-1, which is used in an
CC   example from the present invention

PT   New short interfering nucleic acid containing no ribonucleotides, useful
PT   e.g. for treating viral infection, downregulates expression of target
PT   gene or RNA.
XX
PS   Example 4; Page 142; 204pp; English.
XX
CC   The present invention describes a double-stranded short interfering
CC   nucleic acid (siNA) that downregulates expression of a target gene, where
CC   the siNA molecule comprises no ribonucleotides and each strand of the
CC   double-stranded siNA comprises about 21 nucleotides. Also described: (1)
CC   a siNA molecule that inhibits expression of target RNA; (2) a siNA
CC   molecule that inhibits replication of a virus and optionally does not
CC   require presence of a ribonucleotide for inhibition; (3) a siNA molecule
CC   that inhibits expression of a target gene and does not require presence
CC   of a ribonucleotide for inhibition; (4) a siNA molecule that inhibits
CC   expression of a target gene by mediating RNA interference; and (5) a
CC   method for modulating expression of a gene in a cell using siNA
CC   molecules. SiNA's can have virucide, anti-HIV, hepatotropic,
CC   antiinflammatory, plant antiviral, vasotropic, neuroprotective,
CC   cytostatic, cardiovascular, immunosuppressive, respiratory, nephrotropic
CC   and endocrine activities. The siNA's are useful for downregulating
CC   expression of target genes, inhibiting expression of target RNA, and
CC   inhibiting replication of a virus. SiNA molecules can be used: (a) for
CC   therapy of any disorder that responds to modulation of gene expression,
CC   especially animal and plant viral infections, specifically hepatitis B or
CC   C; HIV; herpes simplex; cytomegalo; human papilloma; respiratory
CC   syncytial or influenza viruses, and also many other diseases such as
CC   restenosis, neurodegeneration, cancers, and cardiovascular, neurological,
CC   prion, inflammatory, autoimmune, pulmonary, renal, liver, mitochondrial,
CC   endocrine or reproductive diseases; and (b) for diagnosis, target
CC   validation, genomic discovery, genetic engineering, pharmacogenomics and
CC   analysis of gene function. Chemical modification of siNA molecules
CC   improves interfering activity; stability; cellular uptake; binding
CC   affinity and/or mediates increased polymerase activity. siNA may be
CC   designed to target many related genes containing a conserved sequence.
CC   The present sequence represents a siNA oligonucleotide sequence, which is
CC   used in the exemplification of the present invention.

PT   New short interfering nucleic acid containing no ribonucleotides, useful
PT   e.g. for treating viral infection, downregulates expression of target
PT   gene or RNA.
XX
PS   Example 4; Page 142; 204pp; English.
XX
CC   The present invention describes a double-stranded short interfering
CC   nucleic acid (siNA) that downregulates expression of a target gene, where
CC   the siNA molecule comprises no ribonucleotides and each strand of the
CC   double-stranded siNA comprises about 21 nucleotides. Also described: (1)
CC   a siNA molecule that inhibits expression of target RNA; (2) a siNA
CC   molecule that inhibits replication of a virus and optionally does not
CC   require presence of a ribonucleotide for inhibition; (3) a siNA molecule
CC   that inhibits expression of a target gene and does not require presence
CC   of a ribonucleotide for inhibition; (4) a siNA molecule that inhibits
CC   expression of a target gene by mediating RNA interference; and (5) a
CC   method for modulating expression of a gene in a cell using siNA
CC   molecules. SiNA's can have virucide, anti-HIV, hepatotropic,
CC   antiinflammatory, plant antiviral, vasotropic, neuroprotective,
```

```
CC   cytostatic, cardiovascular, immunosuppressive, respiratory, nephrotropic
CC   and endocrine activities. The siNA's are useful for downregulating
CC   expression of target genes, inhibiting expression of target RNA, and
CC   inhibiting replication of a virus. SiNA molecules can be used: (a) for
CC   therapy of any disorder that responds to modulation of gene expression,
CC   especially animal and plant viral infections, specifically hepatitis B or
CC   C; HIV; herpes simplex; cytomegalo; human papilloma; respiratory
CC   syncytial or influenza viruses, and also many other diseases such as
CC   restenosis, neurodegeneration, cancers, and cardiovascular, neurological,
CC   prion, inflammatory, autoimmune, pulmonary, renal, liver, mitochondrial,
CC   endocrine or reproductive diseases; and (b) for diagnosis, target
CC   validation, genomic discovery, genetic engineering, pharmacogenomics and
CC   analysis of gene function. Chemical modification of siNA molecules
CC   improves interfering activity; stability; cellular uptake; binding
CC   affinity and/or mediates increased polymerase activity. siNA may be
CC   designed to target many related genes containing a conserved sequence.
CC   The present sequence represents a siNA oligonucleotide sequence, which is
CC   used in the exemplification of the present invention.

PT New short interfering nucleic acid containing no ribonucleotides, useful
PT e.g. for treating viral infection, downregulates expression of target
PT gene or RNA.
XX
PS Example 2; Fig 3; 204pp; English.
XX
CC The present invention describes a double-stranded short interfering
CC nucleic acid (siNA) that downregulates expression of a target gene, where
CC the siNA molecule comprises no ribonucleotides and each strand of the
CC double-stranded siNA comprises about 21 nucleotides. Also described: (1)
CC a siNA molecule that inhibits expression of target RNA; (2) a siNA
CC molecule that inhibits replication of a virus and optionally does not
CC require presence of a ribonucleotide for inhibition; (3) a siNA molecule
CC that inhibits expression of a target gene and does not require presence
CC of a ribonucleotide for inhibition; (4) a siNA molecule that inhibits
CC expression of a target gene by mediating RNA interference; and (5) a
CC method for modulating expression of a gene in a cell using siNA
CC molecules. SiNA's can have virucide, anti-HIV, hepatotropic,
CC antiinflammatory, plant antiviral, vasotropic, neuroprotective,
CC cytostatic, cardiovascular, immunosuppressive, respiratory, nephrotropic
CC and endocrine activities. The siNA's are useful for downregulating
CC expression of target genes, inhibiting expression of target RNA, and
CC inhibiting replication of a virus. SiNA molécules can be used: (a) for
CC therapy of any disorder that responds to modulation of gene expression,
CC especially animal and plant viral infections, specifically hepatitis B or
CC C; HIV; herpes simplex; cytomegalo; human papilloma; respiratory
CC syncytial or influenza viruses, and also many other diseases such as
CC restenosis, neurodegeneration, cancers, and cardiovascular, neurological,
CC prion, inflammatory, autoimmune, pulmonary, renal, liver, mitochondrial,
CC endocrine or reproductive diseases; and (b) for diagnosis, target
CC validation, genomic discovery, genetic engineering, pharmacogenomics and
CC analysis of gene function. Chemical modification of siNA molecules
CC improves interfering activity; stability; cellular uptake; binding
CC affinity and/or mediates increased polymerase activity. siNA may be
CC designed to target many related genes containing a conserved sequence.
CC The present sequence represents a siNA oligonucleotide sequence, which is
CC used in the exemplification of the present invention.

XX
PS   Example 3; SEQ ID NO 2165; 207pp; English.
XX
CC   The present invention describes a double-stranded short interfering
CC   nucleic acid (siNA) that downregulates expression of the vascular
CC   endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC   siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC   delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC   that express siNA; and (5) single-stranded siNA with similar properties.
CC   The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC   ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC   gynaecological activities. The siNA are useful for modulating
CC   (downregulating) the expression of VEGFR genes. The siNA are potentially
CC   useful for treating a wide range of angiogenesis-associated conditions,
CC   particularly cancers, diabetic retinopathy, macular degeneration,
CC   neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC   and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC   drug screening, target identification and validation, genetic
CC   engineering, studying gene function, and also for gene mapping (e.g. of
CC   single-nucleotide polymorphisms). The present sequence is used in the
CC   exemplification of the present invention.

XX
CC   The present invention describes a double-stranded short interfering
CC   nucleic acid (siNA) that downregulates expression of the vascular
CC   endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC   siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC   delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC   that express siNA; and (5) single-stranded siNA with similar properties.
CC   The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC   ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC   gynaecological activities. The siNA are useful for modulating
CC   (downregulating) the expression of VEGFR genes. The siNA are potentially
CC   useful for treating a wide range of angiogenesis-associated conditions,
CC   particularly cancers, diabetic retinopathy, macular degeneration,
CC   neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC   and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC   drug screening, target identification and validation, genetic
CC   engineering, studying gene function, and also for gene mapping (e.g. of
CC   single-nucleotide polymorphisms). The present sequence is used in the
CC   exemplification of the present invention.

CC   that express siNA; and (5) single-stranded siNA with similar properties.
CC   The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC   ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC   gynaecological activities. The siNA are useful for modulating
CC   (downregulating) the expression of VEGFR genes. The siNA are potentially
CC   useful for treating a wide range of angiogenesis-associated conditions,
CC   particularly cancers, diabetic retinopathy, macular degeneration,
CC   neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC   and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC   drug screening, target identification and validation, genetic
CC   engineering, studying gene function, and also for gene mapping (e.g. of
CC   single-nucleotide polymorphisms). The present sequence is used in the
CC   exemplification of the present invention.

XX
CC   The present invention describes a double-stranded short interfering
CC   nucleic acid (siNA) that downregulates expression of the vascular
CC   endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC   siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC   delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC   that express siNA; and (5) single-stranded siNA with similar properties.
CC   The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC   ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC   gynaecological activities. The siNA are useful for modulating
CC   (downregulating) the expression of VEGFR genes. The siNA are potentially
CC   useful for treating a wide range of angiogenesis-associated conditions,
CC   particularly cancers, diabetic retinopathy, macular degeneration,
CC   neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC   and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC   drug screening, target identification and validation, genetic
CC   engineering, studying gene function, and also for gene mapping (e.g. of
CC   single-nucleotide polymorphisms). The present sequence is used in the
CC   exemplification of the present invention.

PT   New double-stranded interfering nucleic acid, useful e.g. for treatment
PT   and diagnosis of cancer, downregulates the vascular endothelial growth
PT   factor receptor gene.
XX
PS   Example 3; SEQ ID NO 2117; 207pp; English.
XX
CC   The present invention describes a double-stranded short interfering
CC   nucleic acid (siNA) that downregulates expression of the vascular
CC   endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC   siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC   delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC   that express siNA; and (5) single-stranded siNA with similar properties.
CC   The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC   ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC   gynaecological activities. The siNA are useful for modulating
CC   (downregulating) the expression of VEGFR genes. The siNA are potentially
CC   useful for treating a wide range of angiogenesis-associated conditions,
CC   particularly cancers, diabetic retinopathy, macular degeneration,
CC   neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC   and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC   drug screening, target identification and validation, genetic
CC   engineering, studying gene function, and also for gene mapping (e.g. of
CC   single-nucleotide polymorphisms). The present sequence is used in the
CC   exemplification of the present invention.

XX
```

```
CC   The present invention describes a double-stranded short interfering
CC   nucleic acid (siNA) that downregulates expression of the vascular
CC   endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC   siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC   delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC   that express siNA; and (5) single-stranded siNA with similar properties.
CC   The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC   ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC   gynaecological activities. The siNA are useful for modulating
CC   (downregulating) the expression of VEGFR genes. The siNA are potentially
CC   useful for treating a wide range of angiogenesis-associated conditions,
CC   particularly cancers, diabetic retinopathy, macular degeneration,
CC   neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC   and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC   drug screening, target identification and validation, genetic
CC   engineering, studying gene function, and also for gene mapping (e.g. of
CC   single-nucleotide polymorphisms). The present sequence is used in the
CC   exemplification of the present invention.

PT   New double-stranded interfering nucleic acid, useful e.g. for treatment
PT   and diagnosis of cancer, downregulates the vascular endothelial growth
PT   factor receptor gene.
XX
PS   Example 3; SEQ ID NO 2094; 207pp; English.
XX
CC   The present invention describes a double-stranded short interfering
CC   nucleic acid (siNA) that downregulates expression of the vascular
CC   endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC   siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC   delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC   that express siNA; and (5) single-stranded siNA with similar properties.
CC   The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC   ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC   gynaecological activities. The siNA are useful for modulating
CC   (downregulating) the expression of VEGFR genes. The siNA are potentially
CC   useful for treating a wide range of angiogenesis-associated conditions,
CC   particularly cancers, diabetic retinopathy, macular degeneration,
CC   neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC   and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC   drug screening, target identification and validation, genetic
CC   engineering, studying gene function, and also for gene mapping (e.g. of
CC   single-nucleotide polymorphisms). The present sequence is used in the
CC   exemplification of the present invention.

XX
CC   The present invention describes a double-stranded short interfering
CC   nucleic acid (siNA) that downregulates expression of the vascular
CC   endothelial growth factor receptor (VEGFR) gene. Also described: (1) a
CC   siNA that downregulates the VEGF gene; (2) kits for in vitro or in vivo
CC   delivery of siNA; (3) conjugates and/or complexes of siNA; (4) vectors
CC   that express siNA; and (5) single-stranded siNA with similar properties.
CC   The siNAs have antiangiogenic, cytostatic, antidiabetic,
CC   ophthalmological, antiarthritic, antipsoriatic, nephrotropic and
CC   gynaecological activities. The siNA are useful for modulating
CC   (downregulating) the expression of VEGFR genes. The siNA are potentially
CC   useful for treating a wide range of angiogenesis-associated conditions,
CC   particularly cancers, diabetic retinopathy, macular degeneration,
CC   neovascular glaucoma, arthritis, psoriasis, endometriosis, angiofibroma,
CC   and polycystic kidney disease. The siNA may also be useful for diagnosis,
CC   drug screening, target identification and validation, genetic
CC   engineering, studying gene function, and also for gene mapping (e.g. of
CC   single-nucleotide polymorphisms). The present sequence is used in the
CC   exemplification of the present invention.

PT New double-stranded short interfering nucleic acid molecule, useful for
PT down-regulating the expression of an endogenous mammalian target gene or
PT for treating diseases that respond to modulation of gene expression or
PT activity.
XX
PS Example 24; SEQ ID NO 397; 593pp; English.
XX
CC The invention relates to a double-stranded short interfering nucleic acid
CC (siNA) molecule that down-regulates expression of an endogenous mammalian
CC target gene comprising one or more chemical modifications and each strand
CC of the double-stranded siNA comprises about 21 nucleotides. The siNA of
CC the invention demonstrates antiarteriosclerotic, neuroprotective,
CC nootropic, antiparkinsonian and anticonvulsant activities and may be
CC useful for down-regulating the expression of an endogenous mammalian
CC target gene and therefore in the treatment of any disease or condition
CC that responds to modulation of gene expression or activity in a cell,
CC tissue or organism. The disease or condition may include pulmonary
CC diseases such as restenosis, atherosclerosis, Alzheimer's disease,
CC Parkinson's disease, epilepsy, dementia, huntington's disease or
CC amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
CC gene therapy applications. The current sequence is that of the siNA DNA-
CC RNA hybrid of the invention.

PT New double-stranded short interfering nucleic acid molecule, useful for
PT down-regulating the expression of an endogenous mammalian target gene or
PT for treating diseases that respond to modulation of gene expression or
PT activity.
XX
PS Example 24; SEQ ID NO 426; 593pp; English.
XX
CC The invention relates to a double-stranded short interfering nucleic acid
CC (siNA) molecule that down-regulates expression of an endogenous mammalian
CC target gene comprising one or more chemical modifications and each strand
CC of the double-stranded siNA comprises about 21 nucleotides. The siNA of
CC the invention demonstrates antiarteriosclerotic, neuroprotective,
CC nootropic, antiparkinsonian and anticonvulsant activities and may be
CC useful for down-regulating the expression of an endogenous mammalian
CC target gene and therefore in the treatment of any disease or condition
CC that responds to modulation of gene expression or activity in a cell,
CC tissue or organism. The disease or condition may include pulmonary
CC diseases such as restenosis, atherosclerosis, Alzheimer's disease,
CC Parkinson's disease, epilepsy, dementia, huntington's disease or
CC amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
CC gene therapy applications. The current sequence is that of the siNA DNA-
CC RNA hybrid of the invention.

PT   New double-stranded short interfering nucleic acid molecule, useful for
PT   down-regulating the expression of an endogenous mammalian target gene or
PT   for treating diseases that respond to modulation of gene expression or
PT   activity.
XX
PS   Example 24; SEQ ID NO 392; 593pp; English.
XX
CC   The invention relates to a double-stranded short interfering nucleic acid
CC   (siNA) molecule that down-regulates expression of an endogenous mammalian
CC   target gene comprising one or more chemical modifications and each strand
CC   of the double-stranded siNA comprises about 21 nucleotides. The siNA of
CC   the invention demonstrates antiarteriosclerotic, neuroprotective,
CC   nootropic, antiparkinsonian and anticonvulsant activities and may be
CC   useful for down-regulating the expression of an endogenous mammalian
CC   target gene and therefore in the treatment of any disease or condition
CC   that responds to modulation of gene expression or activity in a cell,
CC   tissue or organism. The disease or condition may include pulmonary
CC   diseases such as restenosis, atherosclerosis, Alzheimer's disease,
CC   Parkinson's disease, epilepsy, dementia, huntington's disease or
CC   amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
CC   gene therapy applications. The current sequence is that of the siNA DNA-
CC   RNA hybrid of the invention.

CC   of the double-stranded siNA comprises about 21 nucleotides. The siNA of
CC   the invention demonstrates antiarteriosclerotic, neuroprotective,
CC   nootropic, antiparkinsonian and anticonvulsant activities and may be
CC   useful for down-regulating the expression of an endogenous mammalian
CC   target gene and therefore in the treatment of any disease or condition
CC   that responds to modulation of gene expression or activity in a cell,
CC   tissue or organism. The disease or condition may include pulmonary
CC   diseases such as restenosis, atherosclerosis, Alzheimer's disease,
CC   Parkinson's disease, epilepsy, dementia, huntington's disease or
CC   amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
CC   gene therapy applications. The current sequence is that of the siNA DNA-
CC   RNA hybrid of the invention.

CC   of the double-stranded siNA comprises about 21 nucleotides. The siNA of
CC   the invention demonstrates antiarteriosclerotic, neuroprotective,
CC   nootropic, antiparkinsonian and anticonvulsant activities and may be
CC   useful for down-regulating the expression of an endogenous mammalian
CC   target gene and therefore in the treatment of any disease or condition
CC   that responds to modulation of gene expression or activity in a cell,
CC   tissue or organism. The disease or condition may include pulmonary
CC   diseases such as restenosis, atherosclerosis, Alzheimer's disease,
CC   Parkinson's disease, epilepsy, dementia, huntington's disease or
CC   amyotrophic lateral sclerosis. Furthermore, the siNA may be utilised for
CC   gene therapy applications. The current sequence is that of the siNA DNA-
CC   RNA hybrid of the invention.

PT   Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT   strands, useful for inhibiting expression of human vascular endothelial
PT   growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Disclosure; SEQ ID NO 110; 218pp; English.
XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PT   Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT   strands, useful for inhibiting expression of human vascular endothelial
PT   growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Disclosure; SEQ ID NO 212; 218pp; English.
XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PS   Disclosure; SEQ ID NO 291; 218pp; English.
XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

CC describes sense and antisense RNA strands that form an RNA duplex and
CC bind to the target mRNA, such that expression is inhibited and the target
CC degraded. As such, siRNA administered in combination with a therapeutic
CC agent is useful for treating diseases associated with angiogenesis and
CC the overexpression of VEGF, which include diabetic retinopathy, age-
CC related macular degeneration, inflammatory disease, psoriasis and
CC rheumatoid arthritis. Furthermore, it can be used to treat various
CC cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC oligo, a target for siRNA inhibition of the invention.

PT   Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT   strands, useful for inhibiting expression of human vascular endothelial
PT   growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Disclosure; SEQ ID NO 185; 218pp; English.
XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PT   Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT   strands, useful for inhibiting expression of human vascular endothelial
PT   growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Disclosure; SEQ ID NO 100; 218pp; English.
XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
```

```
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PT   Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT   strands, useful for inhibiting expression of human vascular endothelial
PT   growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Disclosure; SEQ ID NO 354; 218pp; English.
XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PT   Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT   strands, useful for inhibiting expression of human vascular endothelial
PT   growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Disclosure; SEQ ID NO 104; 218pp; English.
XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PT   Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT   strands, useful for inhibiting expression of human vascular endothelial
PT   growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Disclosure; SEQ ID NO 313; 218pp; English.
XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

CC This invention relates to novel compositions that comprise short
CC interfering RNA (siRNA) molecules, which can be used to inhibit
CC angiogenesis. Specifically, it refers to siRNAs that target and cause
CC RNAi-induced degradation of mRNA from human vascular endothelial growth
CC factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC region) genes, as well as mutants derived thereof. The present invention
CC describes sense and antisense RNA strands that form an RNA duplex and
CC bind to the target mRNA, such that expression is inhibited and the target
CC degraded. As such, siRNA administered in combination with a therapeutic
CC agent is useful for treating diseases associated with angiogenesis and
CC the overexpression of VEGF, which include diabetic retinopathy, age-
CC related macular degeneration, inflammatory disease, psoriasis and
CC rheumatoid arthritis. Furthermore, it can be used to treat various
CC cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC oligo, a target for siRNA inhibition of the invention.

CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PT Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT strands, useful for inhibiting expression of human vascular endothelial
PT growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT retinopathy and cancer.
XX
PS Disclosure; SEQ ID NO 500; 218pp; English.
XX
CC This invention relates to novel compositions that comprise short
CC interfering RNA (siRNA) molecules, which can be used to inhibit
CC angiogenesis. Specifically, it refers to siRNAs that target and cause
CC RNAi-induced degradation of mRNA from human vascular endothelial growth
CC factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC region) genes, as well as mutants derived thereof. The present invention
CC describes sense and antisense RNA strands that form an RNA duplex and
CC bind to the target mRNA, such that expression is inhibited and the target
CC degraded. As such, siRNA administered in combination with a therapeutic
CC agent is useful for treating diseases associated with angiogenesis and
CC the overexpression of VEGF, which include diabetic retinopathy, age-
CC related macular degeneration, inflammatory disease, psoriasis and
CC rheumatoid arthritis. Furthermore, it can be used to treat various
CC cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC oligo, a target for siRNA inhibition of the invention.

XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PT   Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT   strands, useful for inhibiting expression of human vascular endothelial
PT   growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Disclosure; SEQ ID NO 363; 218pp; English.
XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PS   Disclosure; SEQ ID NO 345; 218pp; English.
XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PT Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT strands, useful for inhibiting expression of human vascular endothelial
PT growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT retinopathy and cancer.
XX
PS Disclosure; SEQ ID NO 199; 218pp; English.
XX
CC This invention relates to novel compositions that comprise short
CC interfering RNA (siRNA) molecules, which can be used to inhibit
CC angiogenesis. Specifically, it refers to siRNAs that target and cause
CC RNAi-induced degradation of mRNA from human vascular endothelial growth
CC factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC region) genes, as well as mutants derived thereof. The present invention

```
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
```

```
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PT   Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT   strands, useful for inhibiting expression of human vascular endothelial
PT   growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Disclosure; SEQ ID NO 484; 218pp; English.
XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

CC This invention relates to novel compositions that comprise short
CC interfering RNA (siRNA) molecules, which can be used to inhibit
CC angiogenesis. Specifically, it refers to siRNAs that target and cause
CC RNAi-induced degradation of mRNA from human vascular endothelial growth
CC factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC region) genes, as well as mutants derived thereof. The present invention
CC describes sense and antisense RNA strands that form an RNA duplex and
CC bind to the target mRNA, such that expression is inhibited and the target
CC degraded. As such, siRNA administered in combination with a therapeutic
CC agent is useful for treating diseases associated with angiogenesis and
CC the overexpression of VEGF, which include diabetic retinopathy, age-
CC related macular degeneration, inflammatory disease, psoriasis and
CC rheumatoid arthritis. Furthermore, it can be used to treat various
CC cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC oligo, a target for siRNA inhibition of the invention.

XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PT   Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT   strands, useful for inhibiting expression of human vascular endothelial
PT   growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Disclosure; SEQ ID NO 478; 218pp; English.
XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PT   Novel short interfering RNA (siRNA) comprises sense and antisense RNA
```

PT strands, useful for inhibiting expression of human vascular endothelial
PT growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT retinopathy and cancer.
XX
PS Disclosure; SEQ ID NO 485; 218pp; English.
XX
CC This invention relates to novel compositions that comprise short
CC interfering RNA (siRNA) molecules, which can be used to inhibit
CC angiogenesis. Specifically, it refers to siRNAs that target and cause
CC RNAi-induced degradation of mRNA from human vascular endothelial growth
CC factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC region) genes, as well as mutants derived thereof. The present invention
CC describes sense and antisense RNA strands that form an RNA duplex and
CC bind to the target mRNA, such that expression is inhibited and the target
CC degraded. As such, siRNA administered in combination with a therapeutic
CC agent is useful for treating diseases associated with angiogenesis and
CC the overexpression of VEGF, which include diabetic retinopathy, age-
CC related macular degeneration, inflammatory disease, psoriasis and
CC rheumatoid arthritis. Furthermore, it can be used to treat various
CC cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC oligo, a target for siRNA inhibition of the invention.

PT   Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT   strands, useful for inhibiting expression of human vascular endothelial
PT   growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Disclosure; SEQ ID NO 162; 218pp; English.
XX
CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
```

```
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
CC   degraded. As such, siRNA administered in combination with a therapeutic
CC   agent is useful for treating diseases associated with angiogenesis and
CC   the overexpression of VEGF, which include diabetic retinopathy, age-
CC   related macular degeneration, inflammatory disease, psoriasis and
CC   rheumatoid arthritis. Furthermore, it can be used to treat various
CC   cancers including breast, retinoblastoma, Wilm's tumour and lymphoma.
CC   Accordingly, these compositions exhibit cytostatic, antidiabetic,
CC   ophthalmological, antiinflammatory, antipsoriatic, antirheumatic and
CC   antiarthritic activities. This oligonucleotide is a human Flt-1 DNA
CC   oligo, a target for siRNA inhibition of the invention.

PT   Novel short interfering RNA (siRNA) comprises sense and antisense RNA
PT   strands, useful for inhibiting expression of human vascular endothelial
PT   growth factor mRNA, for treating angiogenic disease, e.g. diabetic
PT   retinopathy and cancer.

CC   This invention relates to novel compositions that comprise short
CC   interfering RNA (siRNA) molecules, which can be used to inhibit
CC   angiogenesis. Specifically, it refers to siRNAs that target and cause
CC   RNAi-induced degradation of mRNA from human vascular endothelial growth
CC   factor (VEGF), the VEGF receptor (Flt-1) and the Flk-1/KDR (kinase domain
CC   region) genes, as well as mutants derived thereof. The present invention
CC   describes sense and antisense RNA strands that form an RNA duplex and
CC   bind to the target mRNA, such that expression is inhibited and the target
